No.AAMS_UGS/ICC/2024-25/228

CIRCULAR:-

All the Principals of the Affiliated Colleges, Directors of the Recognized Institutions and the Head of the University Departments is invited to this office Circular No. AAMS_UGS/ICC/2023-24/23 dated 08th September, 2023 relating to the NEP UG & PG Syllabus.

They are hereby informed that the recommendations made by the Ad-hoc Board of Studies in Biotechnology at its meeting held on 29th October, 2024 and subsequently passed by the Board of Deans at its meeting held on 30th November, 2024 <u>vide</u> Item No.6.1 (R) have been accepted by the Academic Council at its meeting held on 4th December, 2024 <u>vide</u> item No.6.33 (R) and in accordance therewith marks for the 2 credit SEC courses amended from 100 to 50 in the syllabus of B.Sc. (Biotechnology) (Sem. I & II) for the following SEC course as per appendix (NEP 2020) with effect from the academic year 2024-25.

	Sem	Title	Credits	Marks
	I	Microbial Techniques	2	50
		OR		
B.Sc. (Biotechnology)		Clinical Biochemistry		
SEC	II	Physicochemical Analysis of Soil	2	50
		and Water	,	
		OR		
		Food Adulteration		

(The Circular is available on the University's website www.mu.ac.in).

MUMBAI – 400 032 06th February, 2025

To

(Dr. Prasad Karande) REGISTRAR

All the Principals of the Affiliated Colleges, Directors of the Recognized Institutions and the Head of the University Departments.

AC./6.33 (R) 04/12/2024

Copy forwarded with Compliments for information to:-

- 1) The Chairman, Board of Deans,
- 2) The Dean, Faculty of Science & Technology,
- 3) The Chairman, Ad-hoc Board of Studies in Biotechnology

Preamble

1) Introduction

Biotechnology is a multidisciplinary subject that deals with the application of biological processes for solving problems and designing eco-friendly products and processes. At Undergraduate level learners are offered various subjects that would strengthen their fundamentals in basic sciences as well as explore the fundamentals as well as applications of biotechnology. Subjects such as Chemistry, Biology and Information Technology, computer language form an integral part of the syllabus. Biotechnology plays a key role in industries such as refining, environmental remediation, agriculture and food production, healthcare, pharmacy, animal husbandry, textiles, and nutrition. Learners after completing their biotechnology course can find suitable employment in the research and development, laboratories, pharmacies etc. The syllabus herein discusses the subjects offered at undergraduate level highlighting the respective course as well as program outcomes

2) Aims and Objectives

The course aims at empowering the learners with a strong knowledge base of fundamental sciences, as well as applied sciences that would be useful in process development in various sectors of Biotechnology. On completion of the course the learner will be skilled and equipped with contemporary knowledge in Biotechnology and would be eligible for jobs in varied industrial sectors.

3) Learning Outcomes

The Undergraduate program in Biotechnology has been designed on learning outcome-based curriculum framework. The course covers the areas of Biotechnology along with fundamental Sciences with a range of core subjects in each semester. Along with providing the requisite biotechnology knowledge, the course has enough scope for inter- and multidisciplinary subjects in the form of electives. This course also caters the skill enhancement needs of the learners as well as provides opportunity for exchanges and learning from other disciplines. Every semester has a practical course for strengthening skills in designing and conducting experiments in the field of Biotechnology.

5) Credit Structure of the Program (Sem I, II, III, IV, V & VI) Under Graduate Certificate in Biotechnology Credit Structure (Sem. I & II)

Evaluation Pattern

MAJOR:6 credits

Scheme 1:

Theory/Practical	Credits	No. of Hours	Marks
Theory: Paper 1	2	30	50
Theory: Paper 2	2	30	50
Practical	2	60	50

Evaluation Pattern:

Theory Paper

Internal Continuous Assessment: 40% (20 Marks)	Semester End Examination: 60% (30 Marks)	Duration for End semester examination
Continuous Evaluation through: Quizzes, Class Tests, presentation, project, role play, creative writing, assignment etc.	As per paper pattern	1h 30 minutes

Practicals

Internal Continuous Assessment: 40% (20 Marks)	Semester End Examination: 60% (30 Marks)	Duration for End semester examination
Viva/ assignment/ objective question test (15 Marks), Overall performance (5 Marks) = 20 Marks	One experiment (25 marks for experiment and 5 Marks for Journal = 30 Marks)	3h 30 minutes

PRACTICAL BOOK/JOURNAL

The learners are required to perform 75% of the Practical for the journal to be duly certified. The learners are required to present a duly certified journal for appearing at the practical examination, failing which they will not be allowed to appear for the examination.

VSC: 2 credits

Scheme 1: 1 practical course of 2 credits, Duration: 60 h, Total marks: 50

Internal Continuous Assessment: 40% (20 Marks)	Semester End Examination: 60% (30 Marks)	Duration for End semester examination
Continuous Evaluation through: Quizzes, Class Tests, presentation, project, role play, creative writing, assignment etc. (at least 3)	As per paper pattern	1h 30 minutes

Paper Pattern for 30 marks :

30 Marks per paper Semester End Theory Examination:

1. Duration - These examinations shall be of **Three hours** duration in laboratory

QUESTION PAPER PATTERN (External and Internal)

Paper pattern as per scheme 1

Theory

Internal

Internal Continuous Assessment =20 Quizzes/MCQ/ Class tests- 10 marks Project/ Assignments/ oral presentation(poster /power point)- 10 marks

External

Form	Format of Question Paper: 30 marks			
Q. No.				
1	Do as Directed (Any 5 of 10)	1 and 2	05	
2	Answer in Brief/ Long Answer Questions/Justify/Discuss /Long answer question Any 2 of 4	1	10	
3	Answer in Brief/ Long Answer Questions/Justify/Discuss /Long answer question Any 2 of 4	2	10	
4	4 Application Based Question (Can be divided in sub questions with internal options) 1 & 2			
		Total	30	

Practical - 2 credit course

Internal

Viva/ assignment/ objective question test (15 Marks), Overall performance (5 Marks) = 20 Marks

Practical- Semester end examination

One experiment (25 marks for experiment) or 1 major experiment 15 marks and 1 minor experiment- 10 marks and 5 Marks for Journal = 30 Marks)

Duration-3 h 30 minutes

VSC

Internals

Viva/ assignment/ objective question test (15 Marks), Overall performance (5 Marks) = 20 Marks

Practical- Semester end examination

30 Marks per paper Semester End Theory Examination: Duration - These examinations shall be of **Three hours** duration in laboratory 1.

Letter Grades and Grade Points:

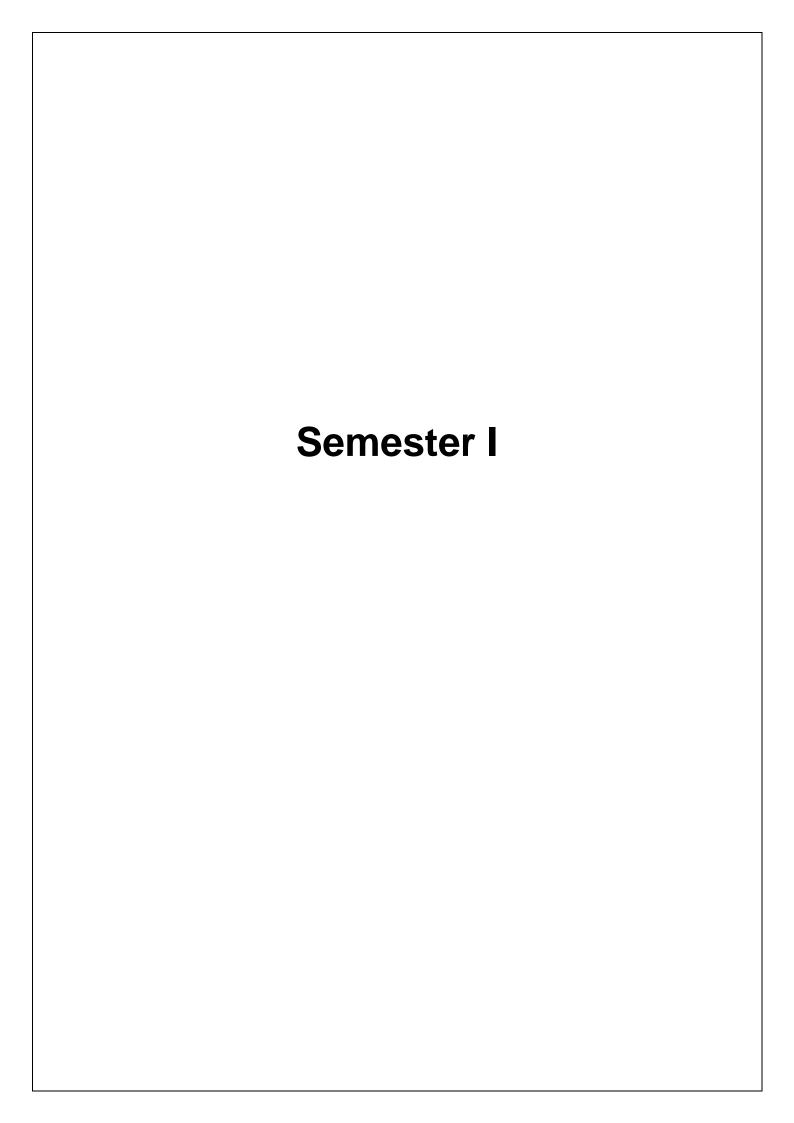

Semester GPA/ Programme CGPA Semester/ Programme	% of Marks	Alpha-Sign/ Letter Grade Result	Gradin g Point
9.00 - 10.00	90.0 -100	O (Outstanding)	10
8.00 - < 9.00	80.0 < 90.0	A+ (Excellent)	9
7.00 - < 8.00	70.0 < 80.0	A (Very Good)	8
6.00 - < 7.00	60.0 < 70.0	B+ (Good)	7
5.50 - < 6.00	55.0 < 60.0	B(Above Average)	6

Course I

Name of the Course: Fundamentals of Biotechnology-I

Sr.No.	Heading	Particulars
1	Description the course : Including but Not limited to:	The course aims to introduce the fundamentals of biotechnology. The learner will be able develop complete understanding of the broad spectrum of biotechnology, emphasizing its relevance, applications in diverse sectors, and ethical considerations. It explores the global demand, job prospects, and connections with other disciplines. The course also focuses on biomolecules, covering carbohydrates, lipids, amino acids, and proteins, providing a foundational understanding for their roles in industrial applications and health care.
2	Vertical :	Major
3	Type :	Theory
4	Credits :	2 credits
5	Hours Allotted :	30 Hours
6	Marks Allotted:	50 Marks
8	 Course Objectives(CO): CO 1. Gain a thorough grasp of biotechnology, exploring its definition, historical context, and applications in various sectors, fostering a broad knowledge base. CO 2. Analyze the scope and significance of biotechnology globally and in India evaluating its potential, achievements, and impact on the burgeoning biotech market, while understanding policy initiatives and trends. CO 3. Develop ethical awareness by examining legal and social-ethical issue in biotechnology CO 4. Grasp the definition, biological functions, and classification of Biomolecules. 	
	 Modules:- Module 1: What is Biotechnology Introduction to Biotechnology Definition; History & Introduction to Biotechnology Scope and Significance of Biotechnology in modern world (3 Lectures) World of Biotechnology Pharmaceutical Biotechnology, Plant Biotechnology, Indu Biotechnology, Marine Biotechnology, Animal Biotechnology, Environm Biotechnology. (5 Lectures) 	

3. Scope of Biotechnology in India

Needs for future development, Global scenario, Potential and achievements of Biotechnology. Bio-business in India, booming biotech market, success story of biotech market, policy initiatives and global trends; Biotechnology research in India (5 Lectures)

4. Legal, Social-ethical issues (2 Lectures)

Module 2: Biomolecules

- Carbohydrates: Introduction, definition, general formula & Properties. Classification of carbohydrates, Concept of glycosidic bond, Industrial applications of carbohydrates: Fermentation, Pharmaceutical and Food industry (6 Lectures)
- Introduction to Lipid Chemistry: Definition and Biological functions of fats and Lipids. Definition of Fatty acids. Classification of Fatty acids (4 Lectures)
- Amino acids: General introduction, Classification and structures, properties (physical & chemical), Peptide bond, Three-dimensional Structure of proteins. (5 Lectures)

12		Semester End Examination: 60% (Refer format of Question paper Below) (Refer format of Question paper)
13	Continuous Evaluation through: Quizzes, Class Tests, presentation, project, role play, creative writing, assignment etc.(at least 3)	

Course II Name of the Course: Microbial Biotechnology

Sr.No.	Heading	Particulars
1		
		This Course provides a foundational understanding of the microbial world spanning history, microscopy, and cultivation, with a focus on sterilization
		techniques and bioprocess technology. Relevant across biology,
	Including	chemistry, and engineering disciplines, these modules meet industry
	but Not	demands in pharmaceuticals, biotechnology, and healthcare, offering
	limited to:	diverse job prospects in research, development, and production. The
	illinitou to:	practical application of theoretical concepts ensures learners are well-
		prepared for dynamic roles in advancing microbial science and
		bioprocessing.
2	Vertical :	Major
3	Type :	Theory
4	Credits :	2 credits
5	Hours	30 Hours
	Allotted :	
6	Marks	50 Marks
	Allotted:	
7		ectives(CO):
		op a comprehensive understanding of microbial science by exploring the
		y, classification, and cultivation techniques, emphasizing the role of
		organisms in everyday life. re proficiency in microscopy principles, including optics, staining
		ques, and the application of microscopes, laying the groundwork for
		cal applications in research and laboratory settings.
	•	ss the principles and techniques of sterilization and disinfection, with a
		on dry heat, steam, radiation, chemical agents, and their applications in
		e settings.
		uction to fundamentals of bioprocess technology, encompassing
		actor design, microbial fermentations, and the industrial production of
		cals, antibiotics, enzymes, and beverages.
8	Course Out	comes (OC): Learner will be able to
	OC 1. compi	rehend the microbial world's historical context, classification, and
		ation techniques, fostering a foundational knowledge base for future
		ific endeavors.
		microscopy principles effectively, showcasing proficiency in optics
		ng techniques, and practical applications, enhancing skills crucial for
		rch and laboratory work.
		ite sterilization and disinfection techniques with precision, showcasing
	•	tise in dry heat, steam, radiation, and chemical agents, ensuring a sound standing of their applications across various fields.
		standing of their applications across various fields. stand the basics of bioprocess technology, including the design of
		actors and the industrial production of chemicals, antibiotics, enzymes, and
		ages, preparing learners for roles in bioprocessing industries.
		ate and analyze the effectiveness of disinfectants, demonstrating critical
		ng skills essential for selecting appropriate methods in healthcare, industry
		esearch settings, contributing to informed decision-making in real-world
		ations.
9	Modules:-	
	Module 1: Ir	ntroduction to Microbial World
L	1	

- History: Discovery of Microorganisms, Role of microorganisms in everyday life. Groups of Microorganisms. (2 Lectures)
- 2. Microscopy: General principles of optics; various parts and their functions objectives numerical aperture, resolving power, depth of focus, working distance aberrations; oculars; condensers. Applications of microscopes.Dark Field Microscope; Phase Contrast Microscope and Fluorescent Microscope (7 Lectures)
- Stains and Staining Solutions- Definition of Dye and Chromogen; acidic and basic dyes; functions and types of chromophore and auxochrome groups. Theories to explain staining. Definition and function of stain; mordant, intensifiers and fixative. (3 Lectures)

Natural and Synthetic Dyes. (1 Lectures)

Simple Staining, Differential Staining – Gram staining and Acid Fast Staining with specific examples (2 Lectures)

Module 2: Sterilisation Techniques & Bioprocess Technology

Introduction: Definition and concept of Sterilization and Disinfection.
 (1 Lectures)

Types and Applications: Dry Heat, Steam under pressure Gases, Radiation and Filtration (2 Lectures)

Chemical Agents and their Mode of Action: Aldehydes, Halogens, Quaternary Ammonium Compounds, Phenol and Phenolic Compounds, Heavy Metals, Alcohol Dyes, and Detergents. (2 Lectures)

Disinfectant: Ideal Disinfectant. Examples of Disinfectants and Evaluation of Disinfectant (2 Lectures)

- Cultivation: Nutritional categories of microorganisms, Design and Types of Culture Media, Concept of Pure culture, Methods of isolation, growth kinetics (3 Lectures)
- BioprocessTechnology: Definition, Design of Bioreactor, Applications o Bioprocess Technology (2 Lectures)
- Microbial Fermentations: Overview of Industrial Production of Chemicals using suitable examples, Antibiotics, Enzymes and Beverages (3 Lectures)

3	 Module Study of Microscope – Compound Microscope (Including Handling and storage) Observation of microorganisms using bright field microscope - Protozoa, Molds Yeasts, Algae – from natural habitat/permanent slides. Monochrome staining using any suitable material. (Bacteria/Plant/Animal tiss Differential staining – Gram staining, Acid fast staining, Romanowsky Fungal staining – wet mount (Lactophenol cotton blue/Methylene Blue) Preparation of media- Nutrient broth and Agar, MacConkey Agar, Sabouraud's A Sterilization of Laboratory Glassware and Media using Autoclave and Hot air over Aseptic transfer of media. Isolation techniques: T-streak, polygon method 	

- 9. Colony Characteristics of Microorganisms.
- 10. Use of Bergey's manual to help identify any one isolate. (Demo)
- 11. Isolation of Yeasts from the natural environment.
- 12. Study of morphology and colony characteristics of yeasts.
- 13. Enumeration of microorganisms by Serial Dilution-Pour plate, Spread plate method
- 14. Growth Curve of E.coli
- 15. Primary screening of antibiotic producers microorganisms from soil by crowded plate technique.
- 16. Qualitative estimation of carbohydrates
- 17. Qualitative estimation of Lipids
- 18. Qualitative estimation of Amino Acids/ Proteins
- 19. Paper Chromatography of amino acid
- 20. Analyse a case-study and write a report on any one recent application of Biotechnology (Not older than past 5 years) (Assignment)
- 21. Summarization & presentation of selected review paper not older than 5 years (under mentoring) (Assignment)
- Field visit to National/ International research institutes for research in biotechnology (Assignment)
- 23. Exploring web resources of National/ International research institutes for research in biotechnology (Assignment)

Name of the Course: Computers in Biology

Sr.No.	Heading	Particulars	
1	Description the course : Including but not limited to:	This course is designed for learners to gain computation skills and relate its application in biological sciences. It will introduce learners to the foundation of computers and biological databases. The practical component will help learners to gain hand-on skills in Ms-Excel and use it for biological databases.	
2	Vertical :	VSC	
3	Type:	Practical	
4	Credits :	2 credits	
5	Hours Allotted :	60 hours	
6	Marks Allotted:	50 Marks	
7	 Course Objectives(CO): CO 1. Develop proficiency in creating and managing biological databases using Minimum Excel, including data organization, formatting, and analysis. CO 2. Explore recent advances in computational biology CO 3. Establish a strong foundation for interdisciplinary work, connecting computational biology with data science and bioinformatics. 		
	 Course Outcomes (OC): Learner will be able to OC 1. create and manage biological databases effectively using MS word, MS Excel and Powerpoint demonstrating proficiency in data organization and analysis. OC 2. Understand and implement recent advances in computational biology OC 3. Demonstrate practical problem-solving skills by comparing and applying MS-Excel tools. 		
9	Module : Practical (2	credits)	
	An Introduction Biology(Assignst 2. File handling: rename, move of the second	ment) copy, rename, delete, type and Directory structure: make, directory	
	 a. Creating, Saving & Operating a document, Editing, Inserting, Deleting Formatting, Moving & Copying Text. b. Find & Replace, Spell Checker & Grammar Checker, c. Document Enhancement (Borders, Shading, Header, Footer), d. Printing document (Page layout, Margins), e. Working with Graphics (Word Art), Working with Tables & Charts, Inserting Files (Pictures, Databases, Spreadsheets) 4. Worksheet Basics: Entering information in a Worksheet, Saving & Opening a Worksheet, Editing, Copying & Moving data, Inserting, Deleting & Moving Columns & Rows, Clearing 5. Using formulas in spreadsheet for simple calculations 6. Creating graphs, pie charts etc in 7. Present analysis of data in Excel in graphical form. 		
	and INDEX. 9. Creation of Cor a. Creation of	a analysis techniques using formulas like VLOOKUP, MATCH, nputer Presentations with graphics: slides, changing layout and using the design tab.	

b. Using the insert tab function for pictures, audio, video, shapes, smart art,

wordart, textbox.

c. Assigning Transitions and animations to slides. 10. Searching/Surfing on the internet Visit to NCBI, EMBL, DDBJ, PIR, KEGG databases 11. Name of the Course: Microbial Techniques

r.No.	Heading	Particulars
1	Description the course : Including but Not limited to:	This course emphasizes biosafety, enumeration, and staining techniques, with practical application of concepts that are relevant to various fields and in demand in the industry. The course enhances students' understanding and essential skills about techniques in microbiology, and prepares them for job prospects in research, teaching, and industry.
2	Vertical :	Skill Enhancement
3	Type:	Practical
4	Credits :	2 credits
5	Hours Allotted :	60 Hours
6	Marks Allotted:	100 50 Marks
8	Course Objectives(CO): (List the course objectives) CO 1. To develop essential skills in microbial techniques and lay the groundwork for more advanced studies in microbiology. CO 2. To demonstrate methods for isolating and quantifying microorganisms from various sources, emphasising on aseptic techniques and proper handling. CO 3. To improve microscopic handling and understand different staining techniques for identifying different microorganisms. CO 4. To develop skills in maintaining accurate laboratory records, including microscopic observations, procedures and results. Course Outcomes (OC): learners will be able to OC 1. employ skills in microbial techniques for more advanced studies in microbiology OC 2. isolate and quantify microorganisms from various sources using aseptic techniques. OC 3. perform and examine different staining techniques for identifying different microorganisms OC 4. maintain accurate laboratory records, including observations, procedures, and results.	
	 Good laboratory practices in microbiology laboratory and Biosafet measures. Enumeration of microorganisms by Breed's count method/using counting chambers. Observation of cell motility in different microorganisms - bacteria, algae paramecium by wet mount method/hanging drop method /swarming growth method. Staining of spirochetes from tooth tartar. Special staining: Endospores staining/Capsule Staining/cell wall staining. Study of the effect of different A) Physical factors like pH, temperature B Chemical factors like Sodium Chloride, heavy metals (oligodynami action) on growth of <i>E.coli</i>. 	

7. Qualitative detection of microbial enzymes like catalase, amylase,

protease, lipase, dehydrogenase.

Course I: Name of the Course: Fundamentals of biotechnology-II

Sr.No.	Heading	Particulars	
1	Description the course : Including but Not limited to:	This Course Aims to introduce genetic engineering essentials, covering cloning, enzymes, vectors, and host cells. The course also explores biotechnology applications in agriculture, animal and human welfare, and environmental solutions. This will develop learners to gain competencies in the vast field of gene manipulation and helps understand the approach to designing solutions.	
2	Vertical :	Major	
3	Type:	Theory	
4	Credits :	2 credits	
5	Hours Allotted :	30 Hours	
6	Marks Allotted:	50 Marks	
7	 Course Objectives(CO): CO 1. Understand the basic steps in gene cloning techniques. CO 2. Explore diverse biotechnological applications, from GM fruits to environmental pollution abatement, gaining practical insights. CO 3. Develop skills in identifying recombinant clones and introducing vectors into both prokaryotic and eukaryotic host cells. CO 4. Understand the role of biotechnology in agriculture, animal science, and human welfare, emphasizing real-world applications. 		
8	 Course Outcomes (OC): Learner will be able to OC 1. grasp the principles of gene cloning, showcasing a conceptual understanding of genetic material manipulation. OC 2. analyze the conceptual frameworks of biotechnology, applying theoretical knowledge to address challenges in agriculture, health, and the environment. OC 3. comprehend identifying and characterizing recombinant clones, emphasizing the conceptual foundations of genetic engineering. OC 4. acquire an understanding of the theoretical underpinnings of biotechnology's role in shaping agricultural practices, animal science, and human health. 		
9	Modules:-		

Module 1:Introduction to Genetic Engineering

1. What is Genetic engineering:

Definition and developments, gene cloning, Steps for cloning (2 Lectures)

- 2. Enzymes in genetic engineering: Restriction endonuclease; DNA ligase; Enzymes to modify ends of DNA molecules exonuclease; endonuclease; S1 nuclease; alkaline phosphatase; polynucleotide kinase; DNA polymerase and klenow fragment; reverse transcriptase; terminal deoxynucleotidyl transferase (3 Lectures)
- Vectors: Role as agents of transfer, Features of plasmid vectors, Plasmid vectors pBR322, pUC etc. (4 Lectures)
- Host cells: E. coli; Bacillus subtilis; Saccharomyces cerevisiae; Xenopus oocytes; Mammalian fertilized egg cell (3 Lectures)
- Introducing vector into host: Prokaryote, Eukaryote, Identification of recombinant clones. (3 Lectures)

Module 2: Applications of biotechnology

- Agriculture: GM fruits- GM papaya, GM tomato, Insect resistant transgenic plants

 Bt cotton, Bt brinjal, Modifications in nutrient quality starch, oilseed protein, golden rice (4 Lectures)
- Animal Biotechnology: Growth, disease resistance, product quality, pharmaceuticals and nutritional supplements, industrial applications (4 Lectures)
- Human welfare: Cloned genes for production of -Insulin; recombinant vaccine for Hepatitis B virus. Molecular farming, Edible vaccines and their advantages (5 Lectures)
- Environment Pollution: Role of Biotechnology in control of pollution (2 Lectures)

10 Text Books

- 1. Dubey, R. C. (1993). A textbook of Biotechnology. S. Chand Publishing.
- 2. Dubey, R. C. (2014). Advanced biotechnology. S. Chand Publishing.

Course II Name of the Course: Molecular Biology & Molecular Genetics

Sr.No	Heading	Particulars	
1	Description the course : Including but Not limited to:	This course aims to develop insights in the field of molecular biology and molecular genetics to match with the pace of evolving molecular studies in biological systems. This course will enable learners to comprehend and apply tools in molecular biology and genetics. Both modules molecular biology and genetics will offer understanding of valuable skills to learners and make them competent for industries seeking professionals and develop interest in research and development in biotechnology.	
2	Vertical :	Major	
3	Type: Theory		
4	Credits :	2 credits	
5	Hours Allotted :	30 Hours	
6	Marks Allotted:	50 Marks	
	 CO 1. Understand the structure and function of DNA and RNA, along with chromosomal organization, to grasp fundamental genetic principles. CO 2. Explore deviations from Mendelian genetic principles, environmental influences on gene expression, and analyze human genetic traits through pedigree analysis. CO 3. Comprehend models of DNA replication, including evidence of semi-conservative replication and the role of enzymes in both prokaryotic and eukaryotic systems. CO 4. Apply knowledge of genetic concepts to interpret and analyze experimental evidence, such as Messelhson and Stahl's experiment, and understand the bidirectional and rolling circle replication mechanisms. 		
8	 Course Outcomes (OC): Learners will be able to OC 1. describe the structure of DNA and RNA, explaining their roles in genetic processes. OC 2. analyze genetic deviations, understand environmental impacts on gene expression, and interpret human pedigrees. OC 3. demonstrate knowledge of DNA replication models, including semi-conservative replication and the role of enzymes. OC 4. apply genetic concepts to analyze experimental evidence, connecting theory with practical understanding. 		
9	 Modules:- Module 1: Nucleic acid, Chromosome and Genetics 1. The Composition and structure of DNA and RNA Nucleotide and nucleoside, Structure of nucleotides, Structure of DNA, DNA double helix. Watson and Crick's model. Structure of RNA. Types of RNA (3 Lectures) 		

- helix, Watson and Crick's model, Structure of RNA, Types of RNA (3 Lectures)
- 2. Prokaryotic and Eukaryotic Chromosome, Euchromatin and Heterochromatin (2 Lectures)
- 3. Extensions of and Deviations from Mendelian Genetic Principles: Multiple Alleles, Incomplete Dominance and Codominance Essential Genes and Lethal Alleles. Effects of the

environment on Gene expression (5 Lectures)

- 4. Gene Interactions and Modified Mendelian Ratios: Epistatic and non-epistatic interactions (3 Lectures)
- 5. Mendelian Genetics in Humans: Pedigree Analysis
- Examples of Human Genetic Traits (2 Lectures)

Module 2: Replication of DNA

1. Models of DNA Replication (1 Lectures)

2. DNA Replication in Prokaryotes (3 Lectures)

Evidence of Semi-conservative DNA replication- Messelhson and stahl's experiment (2 Lectures)

DNA Polymerases and its role, (1 Lectures)

E.coli Chromosome Replication, (1 Lectures)

semi discontinuous replication, pulse chase experiment by R Okazaki

(1 Lectures)

Bidirectional Replication of Circular DNA molecules,

Rolling Circle Replication, theta model of replication (2 Lectures)

- 3. DNA Replication in Eukaryotes-detail steps and role of telomerases (2 Lectures)
- 4. Enzymes and proteins involved in DNA replication (2 Lectures)

Course III

Name of the Course: Practicals

		·
Sr.No.	Heading	Particulars
1	course : Including but Not limited to:	This course intends to develop essential skills to interpret and analyse problems underlying genetic principles. It offers insights into cellular processes like mitosis, meiosis thus linking theoretical principle to practical applications in genetics. It provides hands-on skills in DNA extraction, karyotyping thus meeting industry demand for genetic research and environmental solutions.
2	Vertical :	Major
3	Type:	Practical
4	Credits :	2 credits
5	Hours Allotted :	60 Hours
6	Marks Allotted:	50 Marks
7	 Course Objectives(CO): CO 1. Understand fundamental cellular processes through hands-on exploration of mitosis, meiosis, and DNA extraction from plant materials. CO 2. Acquire skills in genetic analysis, including karyotyping and quantitative assessments of DNA and RNA. CO 3. Demonstrate practical knowledge of genetic concepts, solving problems related to Mendelian genetics and constructing pedigree charts. CO 4. Gain hands-on experience in molecular biology techniques. 	
9	Course Outcomes (OC): Learner will be able to OC 1. explain and demonstrate the steps of mitosis and meiosis, understanding the basis of cellular division in plants. OC 2. develop practical skills in DNA extraction, qualitative/quantitative analysis. OC 3. solve problems based on genetic concepts and their practical applications OC 4. demonstrate basic techniques of molecular biology. Modules:-	
9	Medule 4.	

Module 1:

- 1. Study of mitosis from suitable plant material
- 2. Study of meiosis from suitable plant material/Permanent slides/Photographs
- 3. Study the effect of disinfectants on fomite surfaces.
- 4. Extraction and isolation of genomic DNA from various plant materials.
- 5. Purity and estimation of extracted DNA and RNA using UV-Vis Spectroscopy
- 6. Quantitative estimation of DNA
- Quantitative estimation of RNA
- 8. Study of Karyotype Normal male, Normal female, Down Syndrome, Klinefelter's Syndrome and Turner's Syndrome
- 9. Barr body identification in cells of Buccal smear.
- 10. Problems based on Mendelian Genetics, its modifications and gene interactions.
- 11. Construction of pedigree charts and analysis of Human genetic traits using Pedigree
 - analysis.
- 12. Extraction and isolation of Genomic DNA from E. coli.
- 13. Separation and visualisation of DNA by Agarose gel electrophoresis (Demo)
- 14. Basic problems on Restriction Digestion Mapping
- 15. Study of ABO Blood groups in humans to understand the concept of multiple

Name of the Course: <u>Basics in R with Applications in Biotechnology</u>

Sr.No.	Heading	Particulars	
1		The course aims to develop basic competencies in	
	course:	non-tech learners to handle biological data using R	
	_	as an open source software.	
	limited to:	This Course offers a foundational overview of R	
		programming, covering data types, manipulation, functions, and probability theory.	
		The module is designed to develop hands on	
		practical skills in R, applicable for statistical analysis	
		and visualization for biological data	
		With high industry demand for R proficiency,	
		completion opens doors to roles like data analyst,	
		research assistant and bioinformatician.	
2	Vertical :	VSC	
3	Type:	Practical	
4	Credits :	2 credits	
5	Hours Allotted :	60 Hours	
6	Marks Allotted:	50 Marks	
7	Course Objectives(CC	•	
		undamentals of R programming, including data types,	
	structures, and s	cript writing. skills in data manipulation, using vectors and data	
	frames efficiently		
		ncy in creating and interpreting graphics in R for	
	effective data vis		
		scriptive statistics and probability theory and its	
	applications using commands in R		
	CO 5. Gain hands-on experience in file read/write operations, prep		
8	real-world data handling in various formats. Course Outcomes (OC): Learner will be able to		
	•	and execute R scripts, demonstrating proficiency in	
	basic programmi		
		using vectors and data frames, creating subsets and	
	performing key o	•	
	and analyze data	g visualizations, including plots, charts,to represent	
	,	ability distribution (normal & binomial), and will apply	
	concepts to real-		
		mpetence in reading/writing data files in multiple	
	formats, preparing them for practical data handling tasks in		
	settings.		
9	Modules:- Module:		
	1. Introducing R		
	An overview of RInstallation of R package		
	R sessions		
	2. Data types and data structures in R		

- Numbers and mathematical operations
- String handling
- Vectors
- Arrays
- Matrices
- Data frames
- Lists

3. R scripts

Writing and executing R scripts

4. Logical statements and control loops

- Logical statements
- if else statements
- for loop
- while loop
- break statement

5. Data manipulation with vectors and data frames

- Creating subsets of vectors
- Creating subsets of data frames
- Union and intersection of vectors
- Computing the differences between elements of a vector
- Cumulative sum and product of vector elements
- Finding Unique elements of a vector
- Finding duplicate elements of a vector
- Creating a frequency table
- Getting the index of a vector element
- Joining data frames
- Merging data frames

6. Functions in R

- Writing user defined functions
- Handling functions, libraries and packages

7. Data description

- Data types
- Parent populations and samples
- Statistical parameters Mean (arithmetic), Median
- Range
- Variance
- Standard deviation
- Mode
- Percentiles and quartiles
- Skewness
- Kurtosis

8. Graphics in R

- Overview
- Plotting points and lines with plot() function
- Plotting a math function
- 2D scatter plots
- Histograms
- Bar charts
- Pie charts
- Box and whisker plots for statistical parameters
- Multiple curves on the same plot
- Multiple plots on the same page
- Drawing inside plots low level graphics
- 3D Scatter plots

3D histograms • 3D surface plots Contour plots Plotting images Saving plots as image files 9. Probability Distributions Concept of probability distribution Normal distribution Binomial distribution 10. File read/write Read/Write tables in txt, csv and excel formats Text Books 10 1. http://www.countbio.com/ 2. https://cran.r-project.org/doc/contrib/Paradis-rdebuts_en.pdf 3. https://r4ds.had.co.nz 4. https://education.rstudio.com/learn/beginner/ 11 Reference Books 1. R for Beginners Emmanuel Paradis 2. Hands-On Programming with R - Garrett Grolemund 3. The Undergraduate Guide to R 4. A beginner's introduction to the R programming language -Trevor Martin 5. SEC-1

Name of the Course: Physicochemical Analysis of Soil and Water

Sr.No.	Heading	Particulars	
1	Description the	The course aims to introduce the fundamentals of soil and	
'	course :	water analysis. The learner will be able to develop basic	
	Including but Not	understanding of different routinely used physicochemical	
	limited to:	parameters for soil and water testing. These qualitative and	
	illinted to.	quantitative tests will emphasize the relevance and	
		application in determining the quality of soil and water.	
2	Vertical :	Skill Enhancement	
3	Type:	Practical	
4	Credits :	2 credits	
5	Hours Allotted :	60 Hours	
6	Marks Allotted:	50 Marks	
7	Course Objectives(C	•	
		eness about a clean environment.	
		entific temperament among the learners to understand	
		and agricultural issues.	
		r to determine the quality of soil and water.	
		eness about soil and wastewater treatment processes.	
		and use, environmental awareness and its conservation	
8	•	C): Upon completion of this course, learners will be able to:	
		impact of environmental pollution on agriculture.	
		ical and chemical properties of soil and water.	
		role of soil and water in agriculture.	
	OC 4. Handle basic instruments and chemical reagents used in the		
	soil and water testing laboratory. OC 5. Perform various tests for analysis of soil and water. OC 6. Understand how to improve the quality of soil and water by using suitable treatment methods. Modules:-		
9	Module 1: soil and water analysis		
	1. Determination t	• •	
	2. Determination of universal indica	of pH of Soil Sample pH meter, pH paper and	
		of Electrical Conductivity of Soil Sample	
		of available Nitrate from Soil/ water Sample.	
		of Moisture content of Soil Sample	
		of available Phosphate from soil sample.	
		of Organic Carbon from soil sample	
		of pH and Electrical Conductivity of water sample	
		of Total Alkalinity of Water sample	
		of Acidity of Water sample	
		of total hardness soil and water sample	
	12. Determination of	of salinity of the water sample	
		of Dissolved oxygen of water sample	
	14. Determination of	of TS, TSS, TDS of water sample	
10	Text Books

Name of the Course: Food Adulteration

Sr.No.	Heading	Particulars	
1	Description the course : Including but Not limited to:	This syllabus introduces the critical topic of food adulteration, highlighting its relevance in ensuring food safety and public health. Through practical applications and theoretical insights, students learn to identify, prevent, and address food adulteration	
2	Vertical :	Skill enhancement	
3	Type:	Practical	
4	Credits :	2 credits	
5	Hours Allotted :	60 Hours	
6	Marks Allotted:	100 Marks	
7	 Course Objectives(CO): (List the course objectives) CO 1. Understand the Concept of Food Adulteration: Define and comprehend the various forms of food adulteration, including intentional and unintentional contamination. CO 2. Identify Common Adulterants: Learn to recognize commonly used adulterants in different food products and understand their potential health hazards. 		
	CO 3. Analytical Techniques: Acquire knowledge of analytical methods a techniques used to detect and quantify adulterants in food		
	 Course Outcomes (OC): (List the course outcomes) On completion of the course, learners should OC 1. Be able to identify and detect various forms of food adulteration using appropriate analytical techniques. OC 2. Develop the ability to assess the potential health risks associated with adulterated food. 		
9	Modules:- Module 1:		
	 Concept & types of adulteration, health hazards associated with adulteration Organoleptic testing of food samples Test for adulterants in milk & milk products Detection of adulterants in oil & fats sweetening agents pulses and dals pulses and condiments Detection of common adulterants in miscellaneous products like saffron, common/iodized salt, tea, coffee, vinegar, green peas, pan masala, apples. 		
10	Text Books 1. Food Adulteration and Its Detection" by S. Sukumar. New Age International (P) Limited 2. Food Adulteration: Incidents and Measures" by Ashish Kumar Singh.CRC Press. Reference Books		
		Iteration with rapid test -FSSAI	

12	Internal Continuous Assessment: 50%	Semester End Examination: 50%
13	Continuous Evaluation through: Quizzes, Class Tests, presentation, project, role play, creative writing, assignment etc.(at least 3)

Justification for B.Sc. (Biotechnology)

1.	Necessity for starting the course:	A multidisciplinary field that integrates biological sciences with technology. its emerging applications in diagnostics and therapeutics, food and environment have made the subject essential for learners
2.	Whether the UGC has recommended the course:	Yes
3.	Whether all the courses have commenced from the academic year 2024-25	Yes
4.	The courses started by the University are self-financed, whether adequate number of eligible permanent faculties are available?:	self-financed, permanent faculties are available and some faculties are on contractual basis. Visiting faculties are available for specialism
5.	To give details regarding the duration of the Course and is it possible to compress the course?:	Course duration- 3 years- B.Sc. (Biotechnology) 4 years- B.Sc. (Hons.) in Biotechnology completion of one year will confer certificate in biotechnology, completion of two years will yield diploma
6.	The intake capacity of each course and no. of admissions given in the current academic year:	As per sanctioned intake of the college
7.	Opportunities of Employability / Employment available after undertaking these courses:	Research positions in Institutes and managerial positions in healthcare, personal care industry, Faculty in colleges, schools, scientific writer, scientific assistant/officer/medical representatives/ entrepreneurs, etc.
