Introduction

This programme has been designed keeping in mind that the learners have been introduced to the science of life and are keen to explore this discipline. Life Sciences is a multidisciplinary programme and the concepts of life are understood by comparing and integrating examples from all biological sciences in a seamless experience.

The learner would discover that organisms have developed systems that maximize their utility and hence their existence and efficiency. The learner would also be directed to the fact that all organisms are aware of their surroundings and other life forms and exist as a part of a whole in dynamic harmony.

Practical studies during this course would help the learner to make use of principles in chemistry, physics, mathematics, statistics, bioinformatics and such allied disciplines in experiments using biological systems to estimate and interpret their results. Courses such as the Vocational Skill Course and the Skill Enhancement Course would further equip the learner to gain relevant skills and make them competent in the field of their choice.

The Indian Knowledge System course would enrich the studies in Life Sciences by bringing forth the knowledge packed in ancient texts, traditional medicine and practices and relate that data with the current scientific principles.

This course also provides the learner with an opportunity to relate concepts of allied disciplines to the Major subject by means of the courses in the Minor subject. The Open Elective course further allows the learner to tailor the scope of his or her education by broadly adding knowledge to the learner's major discipline or creating a special application niche in the outside world based on the learner's inherent forte. The On – the – job training concept would enhance the learner's skills and ready them for an opportunity in the real world.

1) Aims and Objectives

- To expose the learner to the diversity of biological organisms.
- To highlight the coexistence of the different lifeforms
- To relate and analyze inheritance of characteristics and traits of organisms.
- Todemonstrate that all organisms live as variations to a central theme of physiology and inheritance.
- To explain the concept of evolution and its theories.
- To outline the structure and various processes of the cell
- To understand the various biomolecules that play a role in the life processes.
- To make the learner aware of our environment and its challenges
- To appreciate the role of microbiota in human health and the environment.
- To enable design of methods to harness the power of biology in industry, health care and the environment.
- To impart hands-on methods of formulating, probing and analyzing problems or challenges regarding all aspects of biology.
- To estimate the significance of a study based on quantification and statistics.
- To make the learner proficient in scientific communication and dissemination of scientific research and concepts.

2) Learning Outcomes

- Summarize various forms of life and their mode of living.
- Explain the physiology of organisms
- Collect and analyze data of biological systems.
- Gain or improve skills related to their choice of study.
- improve current methods of operation
- Design a new method to mitigate challenges.
- Hone skills in niche areas of application
- Aware of skills and knowledge required be a contributing member of society and

industry.		
,		

3) Programme Specific Outcomes:

- PSO 1: Comprehend and evaluate basic biological concepts and integrate perspectives from diverse fields of biology.
- PSO 2: Pursue higher education and research in various branches of biology such as genetics, evolution, cell biology, microbiology, physiology, biochemistry, immunology, developmental biology, neurobiology, ecology, biotechnology and bio-informatics.
- PSO 3: Understand niches within human health and environmental domains wherein life science applications have the potential to bring about substantial and sustainable change.
- PSO 4: Demonstrate proficiency in scientific fields such as biostatistics, bioinformatics and analytical techniques necessary for effective biological research; comprehend biotechnological processes used in industry and to foresee need-based entrepreneurship avenues in all fields of biology.
- PSO 5: Comprehend and use information from varied scientific resources; evaluate and interpret graphical data; formulate testable hypotheses, design experiments and observational strategies in a laboratory setting; exhibit problem-solving skills and present scientific data in oral and written form.
- PSO 6: Work in collaboration in a team, develop interpersonal communication.

5. Credit Structure of the Program (Sem I, II, III, IV, V & VI)

	Including	
	not limite	
		appreciate that all organisms are inter-related and
		the effects on one life form could manifest as a
		result in some other life form. It also underlines the
2	Vertical :	importance of the environment on life. Major
		· ·
3	Type : Credits :	Theory 4 credits (1 credit = 15 Hours Theory in a semester
4	Credits:	4 credits (1 credit = 15 Hours Theory in a semester
5	Hours All	otted: 60 Hours
6	Marks All	
7	Course O	bjectives(CO):
	CO 1.	
	CO 2.	To evaluate the evolution of organism from another.
	CO 3.	To explore the genetic principles that direct inheritance
	CO 4.	To interpret the principles of genetics that lead to evolution
	CO 5.	To describe the variety of life forms
	CO 6.	To illustrate the relationships between different organisms.
	CO 7.	To understand the effect of environment on life.
8	Course O	utcomes (OC):
		e learner would be able to:
		Understand and explain the various theories proposed for the
		origin of life on earth.
	OC 2.	Compare the merits and demerits associated with creation –
		Myths to biochemical theories.
		Correlate and analyze the relationship between micro
		evolution and macro evolution
	OC 4.	To learn the Mendelian laws, monohybrid and dihybrid ratios.
	OC 5.	To differentiate between Mendelian inheritance and
		modifications of Mendel's law.
	OC 6.	To study different genetic disorders caused due to mutations.
	OC 7.	Compare different types of diversities and their relevance to
		their habitats
	OC 8.	Understand and explain the concepts related to biodiversity.
	OC 9.	Identify and classify various threats to sustaining diversity.
	OC 10.	Understand and evaluate the importance of national and
		international efforts in conserving biodiversity
	OC 11.	Understand and explain the concepts related to ecosystems.
		Compare the dynamics of different types of ecosystems.

	OC 13. Understand and evaluate the importance of various factors	
	governing ecosystems.	
9	Modules:- Module 1	Lectures
	Unit 1. Concepts of Evolution: Origin of life: Theories of origin of life: Overview of Creation myths/ Divine creation; Spontaneous generation; Cosmozoic hypothesis; Steady state; Biochemical origin. Biochemical Theories: Origin of macromolecules; Miller's experiment; RNA world. Origin of cells: Protocells; Coacervates; Microspheres; Prokaryotes, Eukaryotes. Evolution: Pre-Darwinian ideas; Darwin's theory of Natural Selection, evidences, and objections Evidences for evolution. Speciation: Concept of species: Physiological species, biological species, evolutionary species; Types of speciation: Allopatric,	15
	sympatric, and parapatric. Micro evolution, macroevolution, and significance of speciation Unit 2. Genetics: Mendelian Inheritance:	15
	Mendel's Laws of inheritance, Mono and Dihybrid ratios with problems, chi square –for 9:3:3:1; 3:1 and 1:1 ratios. Concept of genes- sickle cell anaemia / Thalassemia as an example to explain the Chromosomal inheritance: Sutton's hypothesis, sex-linked inheritance, study of human pedigrees (e.g. Sex linked dominant and recessive; autosomal dominant & recessive)	
	Modifications of Mendel's laws and Mutations Extensions of Mendel's laws: Incomplete dominance, codominance Multiple genes; Multiple alleles: Blood group, Gene interactions and Epistasis (Various ratios) Mutations: Point Mutations, Chromosomal aberrations: Structural: deletion, duplication, inversion, translocation. Numerical: euploidy& aneuploidy (e.g. Downs, Turners. Klinefelter's, Cri- du-chat)	
	Module 2 Unit 3. Biodiversity Introduction to Biodiversity - Definition, Concepts, Scope and Significance Levels of Biodiversity - Introduction to Genetic, Species and Ecosystem Biodiversity	15
	Biodiversity Hotspots- (One example of Indian and International biodiversity hotspot) Value of biodiversity - Direct and Indirect Threats to Biodiversity - Habitat loss Conservation and management of Biodiversity	

Conservation strategies: in situ, ex-situ, National parks, Sanctuaries and Biosphere reserves.

Introduction to International efforts:

Convention on Biological Diversity (CBD),

International Union for Conservation of Nature and Natural Resources (IUCN),

United Nations Environment Program - World Conservation Monitoring Centre (UNEP- CMC)

National Biodiversity Action Plan, 2002-2003

Indian Wildlife (Protection) Act, 1972

Convention for International Trade of endangered species

Unit 4:Concept of Ecosystems and factors influencing them:

Ecosystem: Definition and components. Impact of abiotic factors on biota.

Biogeochemical cycles: (Water, Oxygen, Nitrogen, Sulphur)

Freshwater ecosystem: (Lentic and Lotic)

Food chain and food web in ecosystem: (Fresh water and Grassland).

Ecological pyramids -energy, biomass, and number. **Animal interactions** (commensalism, mutualism, predation, antibiosis, parasitism) Two Case Studies can be mentioned.

10 and 11.

VOCATIONAL SKILL COURSES

Name of the Course: Basic and Advanced Microscopy

Sr.No.	Heading	Particulars	
1	Description the	The course describes the various principles	
	course :	governing microscopy, the components of a	
	Including but	microscope and methods of magnifying	
	Not limited to:	samples and staining methods to easily	
		visualize components of a sample.	
2	Vertical :		
3	Type:	Theory and Practical	
4	Credits: 2 credits (1 credit = 15 Hours for Theory or 30		
		Hours of Practical work in a semester)	
5	Hours Allotted :	15 hours + 30 hours	
6	Marks Allotted:	50 Marks	
7	Course Objectives	s(CO):	
	The course aims to	:	
	CO 1. Introduce lea	arners to the principles, applications and	
	skills of using light	microscopy.	
	CO 2. Introduce lea	arners to principle and applications of other	
		y such as Dark field, phase contrast, fluorescence.	
		arners to electron microscopy.	
	OO 3. IIIII Oddce lea	arriers to electron microscopy.	
8	Course Outcomes	; (OC)-	
	The learner would l	· ,	
		describe the functions of different parts of a	
	compound light mid		
		oound light microscope to observe microscopic	
	structures in a biolo		
		•	
	techniques	ciples and applications of various microscopy

Semester - II

Name of the Course: Biomolecules and Cell Biology

Sr.No.	Heading	Particulars		
1	Description the	This course is the foundation of the basic units of a		
	course:	living cell and the biomolecules that help it		
	Including but	function. It describes the structure of the cells of		
	Not limited to:	different life forms, its division and its		
		biochemistry.		
2	Vertical:	Major		
3	Type:	Theory		
4	Credits :	4 credits (1 credit = 15 Hours for Theory in a semester)		
5	Hours Allotted :	60 Hours		
6	Marks Allotted:	100 Marks		
7	Course Objective	es(CO):		
	To acquaint the learner with: CO 1. The important biomolecules present in living organisms			
	•	sition and structure of the biomolecules.		
	•	n of these biomolecules.		
8	Course Outcome			
0	The learner would			
		the important biomolecules of life.		
	OC 2. Analyze the function of these molecules in living organisms			
	OC 3. Explain the function of these molecules in light of their composition and structure. OC 4. Understand the basic structure of a typical prokaryotic and			
	eukaryotic cell.			
9	Modules:-		Lectures	
	Module 1			
		and Nucleic acids:	15	
	Amino acids: Structures, Classification based on R groups, and			
	dietary requirements- essential, semi essential and non essential			
	amino acids. Proteins : Classification based on hydrolytic products, Functions,			
	-	omplete proteins, Structural organization- Primary,		
		ry, Quaternary levels.		
	Nucleic acids:			
		osides and nucleotides, structure of nucleic acids		
	molecules.	structure of DNA helps in its function as hereditary		
	เมเบเซเนเ ซ อ.			
	Unit 2.			
1	UIIIL Z.		ı	
		nd Lipids:	15	
	Carbohydrates a	•	15	
	Carbohydrates a Carbohydrates: St	ructure of Monosaccharides,	15	
	Carbohydrates a Carbohydrates: St Disaccharides,Olig	ructure of Monosaccharides, gosaccharides, Polysaccharides. Structure and	15	
	Carbohydrates a Carbohydrates: St Disaccharides,Olig	ructure of Monosaccharides,	15	
	Carbohydrates at Carbohydrates: St Disaccharides,Olig function of animal chitin.	ructure of Monosaccharides, gosaccharides, Polysaccharides. Structure and	15	
	Carbohydrates a Carbohydrates: St Disaccharides,Olig function of animal chitin. Lipids: Classificati	tructure of Monosaccharides, gosaccharides, Polysaccharides. Structure and and plant source- starch, glycogen, cellulose and	15	

	Module 2	
	 Unit 3: Overview of Prokaryotic and Eukaryotic cells structure 1. Cell Structure a. Prokaryotic cell structure b. Eukaryotic cell structure 	15
	2. Virus: Virus structure: Plant and Animal virus (One example: TMV and Adenovirus, Coronavirus) 3. Structure of cell wall: Bacterial cell wall, Plant cell wall: Primary and secondary. 4. Cell Cycle and Cell Division: a. Cell cycle (G0, G1, G2, M phases) b. Mitosis and Meiosis and their significance Overview of cell organelles: Structure and function: Nucleus, Endoplasmic Reticulum (Rough and Smooth), Golgi bodies, Mitochondria, Chloroplast, Lysosomes and Peroxisomes	
	Unit 4:Cell membrane and Transport Cell membrane: Membrane models: Unit membrane and Fluid Mosaic Model of Singer and Nicholson. Membrane junctions: Tight, gap, desmosomes, septate. Cytoskeletal apparatus: Microtubules, microfilaments and intermediate filaments. Membrane Transport: a. Passive Transport: Simple diffusion, Facilitated diffusion (Carrier proteins, Channels), Osmosis (one example of each type of transport) b.Active Transport: Uniport, Symport, Antiport, Primary and Secondary active transport c. Bulk transport: endocytosis and exocytosis d. Membrane transport associated disease: Cystic fibrosis.	15

14	Format of Question Pape	er: Details given at the end of the document.	

Name of the Course: Practicals in Biomolecules And Cell Biology

Sr.No.	Heading	Particulars	
1	Description the	This course enables the learner to visualize	
	course :	cell structure and their functions. It also	
	Including but Not	describes experiments that would allow the	
	limited to:	localization and estimation of biomolecules in	
		a cell or tissue. Principles of their estimation	
		would also be covered in this course.	
2	Vertical:	Major	
3	Type:	Practical	
4	Credits :	2 credits (1 credit = 30 Hours of Practical work	
		in a semester)	
5	Hours Allotted :	60 Hours	
6	Marks Allotted:	50 Marks	
7	Course Objectives(Co		
	To acquaint the learne		
	•	ies to locate the biomolecules in the tissue.	
		tion(s) of the biomolecules under study.	
8	Course Outcomes (O	,	
	The learner would be a		
		ction of the biomolecules in the sample.	
	OC 2. To identify its localization in tissues.		
	OC 3. Apprecia	te its function in these tissues.	
9	Modules:-		
	Module 1		
	Unit 1. Biomolecules		30
	1. Concentration and	strengths of solutions	
	2. w/v, v/v, percent	age, ppm, ppb, moles/L, molarity,	
	normality, molality		
	3. Preparation and verification of solutions of desired strengths		
	4. Estimation of Protein by Biuret method.		
	5. Qualitative analysis of Carbohydrates (Glucose, Fructose, Maltose, Sucrose, Starch) and Protein.		
	Histochemistry:	nd Protein.	
	_	sine and Nuclaic acide from the suitable evetem	
	6. Localization of Proteins and Nucleic acids from the suitable system i. Proteins of peas / cockroach muscles		
	ii. DNA and RNA from onion peel using methyl green and pyronin		
	staining		
	7. Localization of Carbohydrates and Lipids;		
	i. Starch grains of Potato / of seeds and other tubers		
		pach/Drosophila/lipids of groundnut	
	Madala

SKILL ENHANCEMENT COURSES

Name of the Course: The General Microbiome

Sr.No.	Heading	Particulars	
1	Description the course : Including but Not limited to:	This course introduces the learner to the microbial world, their types, structure, life cycle and also methods to isolate and recognize them. It also imparts skills on aseptic techniques that are vital to microbiological experimentation.	
2	Vertical :	SKILL ENHANCEMENT COURSES	
3	Type:	Theory and Practical	
4	Credits :	2 credits (1 credit = 15 hours of theory and 30 Hours of Practical work in a semester)	
5	Hours Allotted :	15 hours + 30 hours	
6	Marks Allotted:	50 Marks	
7	Course Objectives(CO): To acquaint the learner with: CO 3. The microorganisms and their types, life cycle. CO 4. The importance of culture media and isolation techniques and preservation of cultures.		
8	Course Outcomes (OC): To identify the microorganisms. OC 3. To learn the life cycle and growth curve of microorganisms OC 4. To learn the importance of culture media, isolation and preservation techniques of microorganisms.		
9	Modules:-	Module 1	Lectures
	 Microorgar Life cycle of the cy	ion to microbiology hisms and their types. of bacteria eg. <i>E. coli</i> rve of bacteria eg. <i>E. coli</i> edia and types of culture media. echniques of bacteria (Streaking methods, te and pour plate) on techniques of bacterial culture.	15
	Module 2		
	Unit 2: Skills in basic microbiology:		
	Staining te Sterilization used in min	n to the Microscope – parts and working. chniques: Gram staining and cell wall staining. n techniques: Working principles of Instruments crobiology;-Hot air oven, Autoclave, Incubator, laminar flow etc.	

and	 Culture media preparation (Liquid media and solid media) in the laboratory. Media transfer under asceptic conditions. Culture of organisms using different media (Basal media/differential media/enriched media). Isolation of microorganisms using streak plate technique. Text and Reference Books: James.C.Cappuccino. 2017. Microbiology A laboratory manual. 11th edition, Pearson education publishers. Kannan, N. 2003. Examination and Standard of Passing:

A. Evaluation of the Major (mandatory) Theory courses: 100 marks.

The evaluation of these courses would include continuous evaluation (internal assessment) and Semester end examinations (External assessment). The evaluation pattern would be as follows:

Internal assessment: 40 marks.

- a. Class test 1: 10 marks
- b. Class Test 2: 10 marks
- c. Quizzes, presentation, project, role play, creative writing, assignment etc. 10 marks
- d. Attendance and Participation: 10 marks.

External Examination for Major (Mandatory) Theory Courses (4 Credits) – 60 Marks

Duration: 2 Hours

Theory question paper pattern:

		Total	60
QJ.	IV	Arry 5 out or 6 (Short hotes)	12
Q5.	Unit I, II, III	Any 3 out of 6 (short notes)	12
Q.4	Unit IV	Any 1 out of 2 (4 or 4 a, b)	12
Q.3	Unit III	Any 1 out of 2 (3 or 3 a, b)	12
Q.2	Unit II	Any 1 out of 2 (2 or 2 a, b)	12
Q.1	Unit I	Any 1 out of 2 (1 or 1 a, b)	12
Question	Based on	Options	Marks

B. Evaluation for Major (Mandatory) Practical Courses (2 Credits): 50 marks.

The evaluation of these courses would include continuous evaluation (internal assessment) and Semester end examinations (External assessment). The evaluation pattern would be as follows:

Each practical course carries a total of 50 Marks, distributed as follows:

Internal Assessment: 20 marks.

The criteria would be as follows:

No.	Criterion	Marks
1	Journal	05
2	Viva	10
3	Attendance/ Participation	05
	Total	20

External Assessment: 30 Marks:

The practical question paper pattern would be as follows:

All questions are compulsory				
Question	Criterion	Marks		
Q1.	Practical performance	20		
Q2.	Spot Tests	10		
	Total	30		

- The duration of each practical course evaluation is 3hours.
- To be eligible for evaluation, students must complete a minimum of 80% of the practical work assigned in each core subject.
- It is mandatory for students to submit a certified journal at the time of the practical examination. The journal serves as a record of their practical work and is an essential component of the evaluation process.

C. Evaluation for Vocational Skill Course: 50 Marks

The evaluation of these courses would include continuous evaluation (internal assessment) and Semester end examinations (External assessment). The evaluation pattern would be as follows:

Internal Assessment: 20 marks.

Theory Component: 10 marks.

Quizzes, class test, presentation, project, role play, creative writing, assignment etc: 10 marks

Practical Component: 10 marks.

Journal: 05 marks

Attendance and Participation: 05 marks.

External Assessment: 30 marks.

Theory Component: 15 marks.

Duration: 1 Hour

Theory question paper pattern:

Question No.	Unit	Question	Marks
Q1.	ı	Any 1 out of 2 (1 or 1a, b)	12
Q2	ı	Any 1 out of 2 (2 or 2a, b)	3
		Total	15

Practical Component: 15 marks.

Assessment of these questions would be done at the time of Major Practical External Assessment. The marks earned by the candidate would be added to the theory component to make a total of 30 marks of External Assessment.

Question No.	Unit	Question	Marks
Q1.	П	Practical Performance	10
Q2	П	Viva	05
		Total	15

Regulations regarding the scheme of exams, number of credits and standard of passing will be as prescribed by the University of Mumbai.

A student is said to have passed if he/she secures 40% of marks allotted in each head of passing. External evaluation of 30 marks and Internal evaluation of 20 marks are treated as separate heads of passing.

The Ten Point Grading System prescribed by the University of Mumbai will be as follows:

Letter Grades and Grade Points:

Semester GPA/Programme CGPA Semester/ Programme	% of Marks	Alpha-Sign/ Letter Grade Result	Grading Point
9.00 - 10.00	90.0 - 100	O (Outstanding)	10
8.00 - < 9.00	80.0 - < 90.0	A+ (Excellent)	9
7.00 - < 8.00	70.0 - < 80.0	A (Very Good)	8
6.00 - < 7.00	60.0 - < 70.0	B+ (Good)	7
5.50 - < 6.00	55.0 - < 60.0	B (Above Average)	6
5.00 - < 5.50	50.0 - < 55.0	C (Average)	5
4.00 - < 5.00	40.0 - < 50.0	P (Pass)	4
Below 4.00	Below 40.0	F (Fail)	0
Ab (Absent)	-	Ab (Absent)	0

Dr. KanchanChitnis	Associate Professor, Department of Life Science, RamnarainRuia Autonomous College, Mumbai	

Justification for B.Sc. (Life Sciences)

1.	Necessity for starting the course:	Life Sciences is a multi-disciplinary course. It exposes the learner to all aspects of biology seamlessly without compartmentalization of individual disciples in biology, chemistry, physics and the quantitative sciences. This encourages novel conceptual reasoning and challenges an inflexible traditional approach to biology. This would be a refreshing approach to mitigate the challenges faced by society at large.
2.	Whether the UGC has recommended the course:	YES
3.	Whether all the courses have commenced from the academic year 2024-2025	The courses are scheduled to begin from the academic year 2024 – 2025.
4.	The courses started by the University are self-financed, whether adequate number of eligible permanent faculties are available?:	The self-financed courses would be run by permanent faculty and supported by visiting or guest faculty.
5.	To give details regarding the duration of the Course and is it possible to compress the course?:	The course would be of four years. It would not be possible to compress the course.
6.	The intake capacity of each course and no. of admissions given in the current academic year:	60 seats for one division. Admissions will be held from 2024-2025 onwards
7.	Opportunities of Employability / Employment available after undertaking these courses:	The opportunities would include biology based industries and organizations such as health care, food and feed, environment etc. research opportunities and in the field of education.
