UNIVERSITY OF MUMBAI No.UG/212 of 2003

Areference is invited to the Ordinances, Regulations and syllabi relating to the helerence is an analysis of the Angust 2002 and the Principals of the Circular No. UG/347 of August, 2002 and the Principals of the affiliated Colleges in hereby informed that the recommendation made by the Faculty of its meeting held on 26th March, 2008 has been accepted by the Council at its meeting heid on 15th April, 2008 vide item No.4.30 and and syllabi for the Second (Sen. III & IV) leading to the B.E. degree course for the Automobile the same will be brought into force efect from the academic year 2008-2009.

ABAI-400 032

une, 2008

The Principals of the affiliated colleges in Engineering.

430/15.4.2008

M212-A of 2008, MUMBAI-400 032

5th June 2008

Copy forwarded with compliments for information to:-

1) The Dean, Faculty of Technology,

The Chairman, Board of Studies in Mechanical Engineering.

The Controller of Examinations,

The Co-Ordinator, University Computerization Centre,

The Deputy Registrar (Eligibility and Migration Section), we students Welford University Development, the Deputy Registrar (Eligibility and Migration Section), the Deputy Registrar (Eligibility and Migration Section), which we be the Deputy Registrar (Eligibility and Migration Section), the Deputy Registrar (Eligibility and Migration Section), which we see the Deputy Registrar (Eligibility and Migration Section), which is the Deputy Registrar (Eligibility and Migration Section), which is the Deputy Registrar (Eligibility and Migration Section), which is the Deputy Registrar (Eligibility and Migration Section), which is the Deputy Registrar (Eligibility and Migration Section), which is the Deputy Registrar (Eligibility and Migration Section), which is the Deputy Registrar (Eligibility and Migration Section), which is the Deputy Registrar (Eligibility and Migration Section), which is the Deputy Registrar (Eligibility and Migration Section). of College and University Development, the Deputy Registrar (Eligibility and Migration the Mulents Welfare, the Executive Secretary to the Vice-Chancellor, the Pro-Vice-Chancellor, the Pro-Vice-Ch the Assistant Registrar, Administrative sub-center, Ratnagiri for information.

1.2 Continuity (only statement) and derivability	
1.3 Analytic Function. Necessary conditions for the function to be analytic	De , -
(statement of sufficient condition)	
1.4 Cauchy Riemann equations in polar coordinates	
1.5 Harmonic function and orthogonal trajectories	
1.6 Milne-Thomson method to find analytic Function f(z)=u+iv given u,	for
v, u+v, u-v odule 2. Mapping	
2.1 Conformal mapping	03
2.2 Standard transformations and Bilinear transformation	
odule 2.3 Fixed points and cross ratio	
3. Complex Integration	11
3.1 Regions and Paths in the Z-plane	
3.2 Line integral of a function of complex variable	
3.3 Cauchy's integral theorem	*
3.4 Cauchy's integral formula and deduction (without proof)	
3.5 Taylor's and Laurent's development (without proof)	
evaluation evaluation	
Laplace's Transforms	-9
4.1 Function of bounded variation (statement only)	07
421	
4.2 Laplace's transforms of 1, t ⁿ , e ^{at} , sin(at), cos (at), sinh (at),	cosh (at)

4.3 Linearity property, expressions (without proof) for L[eat f (t)]. $L[f(at)], L[t^n f(t)], L[f(t)/t], L\left\{\int_{\Omega} f(u) du\right\}$ 4.4 Periodic functions, Heaviside unit step function, Dirac-delta Function and their Laplace transforms (statement only) 5. Inverse Laplace Transforms 07 5.1 Linearity property evaluation of inverse Laplace Transforms using Module 05 theorems and by partial fraction method 5.2 Convolution Theorem (without proof) and Heaviside development 5.3 Application to solve initial and boundary valve problems involving ordinary differential equations with one dependent variable 6. Matrices 12 Module 06 6.1 Types of Matrices 6.2 Adjoint of a matrix, Inverse of a matrix. Orthogonal and Unitary Matrices. 6.3 Elementary transformations, rank of a matrix. 6.4 Reduction to a normal form. 6.5 System of homogeneous and non homogeneous equations, their Consistency and solution. 6.6 Brief revision of vectors over real field . Inner product, Norm, dependence and independence. Orthogonality of matrix 6.7 Characteristic polynomial, values and vectors of square matrix 6.8 Characteristic polynomial, Cayley Hamilton Theorem (without proof) Functions of square matrix

Theory Examination:

- 1. Question paper will comprise of total seven question, each of 20 Marks
- 2. Question one will be compulsory and based on maximum part of syllabus
- 3. Remaining questions will be mixed in nature (for example supposed Q 2 has part (a) from module 3 than from module 3 then

part (b) will be from any module other than module 3)

4. Only five question need to be solved

In question paper weightage of each module will be proportional to number of respective lecture box--respective lecture hours as mentioned in the syllabus

Term Work:

The distribution of marks for term work shall be as follows

Tutorial work (One assignment on each module containing 05 problems)
 Test (at least one)
 Attorday

Attendance (Tutorial & theory) 05 Marks

Scanned with OKEN Scanner

TOTAL:	25 Marks.
--------	-----------

STRESS AND STRAIN: - Definition, Stress strain, tensile and compressive STRESS AND STRAIN .- Dominion, Hooke's law, Poisson's ratio, modulus of stresses, shear stress-Elastic limit, Hooke's law, vield stress ultimate of stresses, shear stress-Elastic million, relation between elastic constants volumes of elasticity, modulus of rigidity, bulk modulus, yield stress, ultimate stress, factor of elasticity, modulus of rigidity, bulk modulus, yield stress, ultimate stress, factor of elasticity, modulus of rigidity, bulk modulus, yield stress, ultimate stress, factor of elasticity, modulus of rigidity, point find between elastic constants, volumetric safety, state of simple shear, relation between elastic constants, volumetric safety, state of simple shear, relation deformation of tangering

safety, state of simple shear, relation bottom state of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation strain for tri-axial loading, deformation of tapering members, strain, volumetric strain for tri-axial loading, deformation strain, volumetric strain for the sold serving sections, composite sections, deformation due to self weight, bars of varying sections, composite sections,

Module 02

Temperature stresses

SHEAR FORCE AND BENDING MOMENT IN BEAMS: Axial force, shear force 08

SHEAR FORCE AND BENDING MOMENT IN BEAMS: Axial force, shear force 08 SHEAR FUNCE AND BETTOTION STATE AND BETTOTION SHEAR SHEAR FUNCE, Shear and bending moment diagrams for statically determinate beams including and bending moment diagrams for different types of loading, relationship. and bending moment diagrams for different types of loading, relationship between beams with internal fringes for different moment rate of loading, shear force and bending moment.

Module

03

STREESES IN BEAMS:- Theory of pure bending, Assumptions, Flexural formula for straight beams, moment of resistance, bending stress distribution, Section moduli for different sections, beams of uniform strength, Flitched beams, Principle axes, Principle moment of inertia. Direct and bending stresses, Core of section, Chimneys subjected to wind pressure.

SHEAR STRESSES IN BEAMS: Distribution of shear stress across plane sections used commonly for structural purposes, shear connectors

Module 04

TORSION: Torsion of circular shafts – solid and hollow, stresses in shaft when 08

transmitting power, Shafts in series and parallel.

PRINCIPLE STRESSES: General equations for transformation of stress, principal planes and principal stresses, maximum shear stress, determination using Mohr's circle, maximum principal & max. shear stress theory of failure Combined Bending and Torsion, Equivalent Bending moment and equivalent

Module 0.5

DEFLECTION OF BEAMS: Deflection of cantilevers, simply supported and over 08 hanging beams using double integration and Macaulay's methods for different

THIN CYLINDRICAL AND SPHERICAL SHELLS: Stress and strain in thin types of loadings Cylinders and spheres due to internal pressure, Cylindrical shell with hemispherical ends.

Module

COLUMNS AND STRUTS: Buckling load, Types of end conditions for column. Euler's column theory and its Limitations , Ranakin Gordon Formula

STRAIN ENERGY Resilience, proof Resilience, Strain energy stored in the member due to gradually applied load, suddenly applied load, impact load strain energy stored due to shear Strain energy due to bending. Strain energy due to Torsion.

List of Experiments:

- 1. Tension test on mild steel bar (stress- strain behavior, modulus determination)
- 2. Test on tor-steel
- 3. Test on cast iron (transverse, tension)
- 4. Shear test on mild steel, cast iron, brass

```
n lest on mild steel bar/cast iron bar

Theory Examination:

1. Question paper ::	nprise of total seven questions, each of 20 Marks
2. Only five question	to be solved.
3. Question one will the	empulsory and based on maximum part of syllabus.
4. Remaining quest on from module 3 then :::	(b) will be from any module other than module 3)
5. In question paper a respective lecture has	htage of each module will be proportional to number of as mentioned in the syllabus.

Practical Examination:

Practical examination will be based on part B of the Term work

19m Work:

A Total 4 numbers of half imperial drawing sheets

A Total 4 numbers of half imperial drawing sheets

Sheet on Module 1 minimum 3 problems

Sheet on details to assembly of any two topics from Module 2

15heets on details to assembly of any two topics from Module 3

15heet on assembly to details of any unit topics from Module 4

15heet on details to assembly of any two topics from Module 5

15heets on details to assembly of any two topics from Module 5

15heet detail- assembly of Module 6 with fits and tolerances

B. Practicals in AUTOCAD

Compute raided drawing and designing of Assembly, joints, Gears, spring, shaft, pipe fittings, Bearings Jigs and fixtures, I.C. engine parts, pulleys and belts, Limits, fits and folerances, Rivets, Preparation of 2-D drawings for machine components (bolts, nuts, flange coupling, connecting rod.) - 3-D modeling - solid, surface, wire frame using standard CAD packages, creation of 2-D drawings from 3-D models using CAD packages, different views, sections, isometric view and dimensioning them - parametric modeling, creating standard machine parts, connecting rod, flange coupling.

 $_{\mbox{\scriptsize Minimum}}$ Four Print out of problems solved in the practical class to be attached in the $_{\mbox{\scriptsize Term}}$ work (module 2 to 6)

The distribution of marks for term work shall be as follows:

Journal containing of drawing sheets (20) Marks.
Test (at least one): (20) Marks.
Attendance (practical & theory): (10) Marks.

TOTAL: (50) Marks.

Detailed Syllabus

Lectures/Week

1. Communication in a business organization:

06

Internal and external communication, Types of meetings, strategies for conducting successful business meetings, documentation (notice, agenda, minutes, resolution) of meetings. Introduction to modern communication techniques.

(e-mail, internet, video-conferencing, etc.) Legal and ethical issues in communication (Intellectual property rights: patents, TRIPS, Geographical indications).

Advanced technical writing:

08

Report writing: Definition and importance of reports, qualities of reports, language and style in reports, types of reports, formats (letter, memo, project-repots). Methods of compiling data for preparing report.

A computer-aided presentation of a technical project report based on survey-based or reference based topic. The topics are to be assigned to a group of 8-10 students. The written report should not exceed 20 printed pages.

Technical paper-writing, Writing business proposals.

Interpersonal skills:

3

04

Introduction to emotional intelligence, motivation, Negotiation and conflict resolution, Assertiveness, team-building, decision-making, time-management, persuasion

Presentation skills:

04

Elements of an effective presentation, Structure of a presentation, Presentation tools, Audience analysis, Language: Articulation, Good pronunciation, Voice quality, Modulation, Accent and Intonation.

04

Career skills:

preparing resumes and cover letters. Types of Resumes, Interview techniques: Preparing for job interviews, facing an interview, verbal and non-verbal communication during interviews, observation sessions and role-play techniques to be used to demonstrate interview strategies (mock interviews).

Group discussion:

group discussions as part of selection process.
Structure of a group discussion, Dynamics of group behavior, techniques for effective participation, Team work and use of body language.

ferm work: Part-I (25 Marks): Assignments;

2855ignments on communication topics

3assignments on report-writing

3assignments on interpersonal skills

2 assignments on career skills

At least one class test (written)

Distribution of term work marks will be as follows:

Assignments : 10 marks

Written test : 10 marks

Attendance (Theory and Practical): 05 marks

Term work: Part-II (25 Marks): Presentation;

Distribution of term work marks will be as follows:

Project report presentation : 15 marks

Group discussion : 10 marks

The final certification and acceptance of term-work ensures the satisfactory performance of laboratory work and minimum passing in the term-work.

Books recommended:

1. Fred Luthans: Organizational behavior, McGraw Hili

 Lesikar and Petit, Report writing for business, Tata McGraw Hill
 Huckin & Olsen, Technical writing and professional communication, McGraw Hill

Wallace & Masters, Personal development for Life & work, Thomson Lerning.

Heta Murphy, Effective Business Communication, McGraw Hill
 Raman and Sharma, Report writingna, Report writing.

2.3 Velocity and Acceleration -- analysis by relative method (mechanisms upto 6 link) including pairs involving Coriolis acceleration (Graphical Approach). Module 03 Kinetics of Rigid Bodies: 3.1 Mass M. I. about centroidal axis and about any other axis.Radius of Gyration, DAlemberts Principle of bodies under rotational motion about a fixed axis and plane motion. Applications of motion of bars, cylinders and spheres only. 3.2 Kinetics of Rigid Bodies: Work and Energy Kinetic energy in translating motion, Rotation about fixed axis and in general plane motion. Work energy principle and conservation of energy. Module 04 Static & Dynamic force analysis of plane mechanisms: 4.1 Static and dynamic force analysis in slider crank mechanisms (neglecting mass of connecting rod and crank), Engine force analysis, Turning moment on crank shaft 4.2 Dynamically equivalent systems to convert rigid body to two mass systems with and without correction couple. 4.3 Flywheel and its applications, Fluctuation in energy, function of flywheel, estimating inertia of flywheel for reciprocating prime movers and machines. Module 05 5. Flexible Connectors: 5.1 Belt & Rope Drives - Types of belts, velocity ratio, slip & creep of belt, length of belt for open & cross systems, law of belting, dynamic analysisdriving tensions, centrifugal tension, initial tension, condition of maximum power transmission. 5.2 Chains – types of chains, chordal action, variation in velocity ratio, chain length. Module 06 Gears 6.1 Law of gearing. 8 6.2 Conjugate profile and its graphic construction 6.3 Involute and Cycloid gear tooth profile. 6.4 Construction of Involute profile. 6.5 Path of contact, arc of contact, contact ratio for involutes and cycloid tooth profile. 6.6 Interference in involutes gears. Critical Numbers of teeth for interference free motion. 6.7 Methods to control interference in involutes gears

Theory Examination:

1. Question paper will comprise of total seven questions, each of 20 Marks

Static force analysis in gears- spur, bevel, helical, worm & worm

2. Only five question need to he solved.

```
3. Question one will be compulsory and based on maximum part of syllabus
      3. Remaining questions will be mixed in nature (for example supposed Q 2 has part (a) 4. Remaining questions will be mixed in nature (for example supposed Q 2 has part (a)
      from module 3
        then part (b) will be from any module other than module 3)
      5. In question paper weightage of each module will be proportional to number of
      respective lecture
        hours as mentioned in the syllabus.
Oral Examination
Oral examination will be based on above syllabus.
Term Work:
   1. THEORY ORIENTED:
Assignment based on topics covered under modules 1, 4, 5 & 6.
   2. PROBLEM ORIENTED: (To be covered in practical Hrs.)
A Graphic work (on half imperial drawing sheets)
(a) Location of instantaneous center (para 2.1) 3P
(b) Velocity analysis by ICR (para 2.1) 3P
 (c) Velocity analysis by relative method (para 2 2, 2 3) 3P
 (d) Velocity - Acceleration analysis by relative method (para 3 1, 3 3) 3P
 (e) Construction of conjugate / involved profiles (para 5.2.5.3) 1P
 (f) Construction of x-t, v-t, a-t, j-t curves (para 6.3) of follower motions 2P
 B Analytical / Numerical work
 1 Velocity - Acceleration analysis by analytical method (para 3 2, 3 3) 3P
 2 Numerical Problems on belts / chains (para 4.1, 4.2) 2P
 3 Numerical Problems on gear (para 5.5, 5.6, 5.7) 3P
 4 Numerical Problems on cams (para 6.3, 6.4, 6.5) 3F
     (P = Problem)

Economics of metal cutting:- parameters affecting machining cost. Tool life for minimum cost and for max. Productivity

Measurement of cutting forces:- different types of dynamometers and their 06 operations. Tool life definition, mechanism of tool wear and measurement, peliminary and ultimate feature, factors Influencing tool life such as speed feed death of cut, tool material, cutting fluids etc. Surface finish-influence of various parameters cutting tool materials-composition, field of application and manufacture (carbon tool steel, high speed steel, non-ferrous alloys, carbides adderamics) coolants -function of coolants, effects on cutting force, tool life and surface finish. Types of coolants. Choice of coolants

Design of cutting Tools:- Tool geometry and definition of principles tool angles 07 of single point cutting tools. Design of single point cutting tools. Form tools. Bring tools, Drills, Reamers Milling cutters. Inserted type cutters. Broach tools

Miling-mechanism of process, mean chip thickness, power calculation milling...ges. mising, standard cutters and limitations, gear hobbing, gear shaping, gear shaving and gear grinding processes

Meet-metal Working: - Elementary treatment of press working, operation on Plesses, press devices and classification of presses, design of blanking.

Percon Compercing compound, progressive, bending, forming, and drawing dies, load special of purches Gloulations, development of blanks, scrap strip layout, design of punches selection of Rection of die-sets, stock guides, strippers, pilots, stop, etc. selection of Messes capacities and other details

Rolling and Forming of metal: principles and process characteristics roll Resource forming of metal: principles and process characteristics for the following militipes and power in rolling. Principles of roll pass design and power in rolling. Ming multiples and capacities. Miscellaneous processes like thread rolling.

Totging extrusion rotary swaging (process types advantages limitations and

12

Hrs

- 1. Question paper will comprise of total seven question, each of 20 Marks
- 2. Only five question need to be solved.
- 3. Question one will be compulsory and based on maximum part of syllabus.
- 3. Question one will be compared in nature (for example supposed Q.2 has part (a) from

part (b) will be from any module other than module 3)

5. In question paper weightage of each module will be proportional to number of respective lecture hours as

mentioned in the syllabus.

Oral Examination:

Oral examination will be on maximum portion of syllabus.

Term Work:

At least one assignment on each module of the Syllabus shown above including at least lwo A. 3 Sheets on press tools and Jigs and fixtures.

The distribution of marks for term work shall be as follows:

•	Laboratory work (Assignments):	(10) Marks.
•	Test (at least one):	(10) Marks.
•	Attendance (practical & theory):	(05) Marks.

TOTAL: (25) Marks.

Text Books:

- 1. Tool Design By Donaldson.
- 2. Jigs & Fixtures By P H Joshi.
- 3. Prod.Tech. By R.C.Patel & C.G. Gupte.
- 4. Workshop Tech. By W.Aj. Chapman
- 5. Machining Process By H.L. Juneja

References:

- 1. Fundamentals of Tool Design By ASTME
- 2. Metal cutting Theory & Cutting Tool Designing By V. Arshinov, G Alekseev
- 3. Fundamentals of By Donaldson
- 4. principle of Metal cutting By Sen & Bhattacharya
- 5. Fundamentals of Metal MACHINING By Geoffery Boothroyd
- 6. Fundamentals of Tool Design By ASTME
- 7. Introduction to Jigs & Tool Design By MHA Kempster.
- 8. Production Tooling & Equipment By WA J Parsons 9. Die Design Fundamentals By J.R. Paquin.
- 10. Rolling of Strip, Sheet & Plate By E C Larke & M. Cook. 11. RollPass Design By British Steel Corporation
- 12. Techniques of Press Working Sheet Metal By Earry Reed 13. Production Technology - HMT

Lattice Imperfections.

Hrs.

Definition, classification and significance of Imperfections

point defects, vacancy, interstitial and impurity atom defects. Their formation and effects.

Dislocation: Edge and screw dislocations Burger's vector. Motion of dislocations and their significance

Sulface defects, Grain boundary, sub- angle grain boundary and stacking faults Surface detects. Generation of dislocation. Frank Reed source, conditions of their significance. multiplication and significance

Dislocation interactions, Elimination, multicomponent dislocation. Dislocation pile up. Dislocation jog dislocation climb

Deformation:

Definition, elastic and plastic deformation and significance in design and shaping

Deformation in single crystal and polycrystalline materials

Mechanism of deformation. Critical stress for deformation

Deformability of FCC, BCC, and HCP lattice, slip systems

Strain Hardening:

Definition importance of strain hardening

Dislocation theory of strain hardening. Effect of strain hardening on engineering behaviour at behaviour of materials. Recrystallization Annealing. Theory and stages of lecovery. Recrystallization and grain growth. Factors affecting recrystallation. Recrystallation. Recrystallation temperature. Hot and cold working theory. Their advantages. enorsalications and applications Fracture

Definition and types of facture

being of facture. Griffth's teory of facture. Orowan's modification. Dislocation theony of facture. Critical stress and crack propagation velocity for brital fracture.

Ductile fracture

Molth effect on fracture

Ductility transition. Definition and signification. Conditions of ductility transition. factors affecting it. Definition of fatigue and significance of cyclic stress Fatique Failure: Mechanism of fatigue and theories of fatigue failure Fatigue testing. Test data presentation and statistical evolution. S.N. Curve and Fatigue testing. Test data presentation and statistical evolution. S.N. Curve and its interpretation, Influence of important factors on fatigue. Notch effect surface its interpretation, Influence of important fatigue. effect Effect of pre-stressing, corrosion fatigue Thermal fatigue Effect of temperature on mechanical behaviors of materials Definition and signification of creep. Creep testing and data presentation. Mechanism and types of creep. Analysis of classical creep curve Creep Resistant materials. 6 Theory of Alloys& Alloys Diagrams Module Significance of alloying, Definition. Classification and properties of different 0.3types of alloys. Different types of alloy diagrams and their analysis. Importance of Iron as engineering material, Allotropic forms of Iron, Influence of carbon in Iron-Carbon alloying Iron-Iron carbine diagram and its analysis 6 Heat treatment Process Module 04 Technology of heat treatment Classification heat treatment process. Annealing-Principle process, properties and applications of full annealing Diffusion annealing, process annealing and Cyclic annealing, Annealing defects and their remedies. Normalizing. Hardening heat treatment, Hardening baths, Hardening media, Salt baths, Hardenability. Tempering, Subzero treatment, Austempering, Martempering, Maraging and Ausforming process. Module Surface Hardening & Diffusion Coating Processes 4 05 Hardening and surface Hardening methods. Their significance and applications Carburizing, Nitriding, Cyaniding, Carbonnitriding, induction hardening and flame hardening processes. Diffusion coating processes of Colorizing, Chromising Siliconizing and Boron diffusion Module Effect of Alloying Elements in Steels: 06 Limitation of plain carbon steels. Significance of alloying elements Effects of major and minor constituents, Effect of alloying elements on ferrite carbide, austenite. Effect of alloying elements on phase transformation decomposition, hardening and tempering Classification of tool steels and metallurgy of tool steels and special steels
