

CIRCULAR :-

A reference is invited to the Ordinances, Regulations and Syllabi relating to the Bachelor of Pharmacy (B.Pharm.) degree course *vide* Pamphlet No. 187 and to this office Circular No.UG/451 of 2003 dated 16th September, 2003 and the Director, Mumbai University Institute of Chemical Technology and the Principals of the affiliated colleges in Pharmacy are hereby informed that the recommendation made by the Ad-hoc Board of Studies in Pharmacy at its meeting held on 24th May, 2007 has been accepted by the Academic Council at its meeting held on 12th June, 2007 *vide* item No. 4.4 and that in accordance therewith, the syllabus of F Y B Pharm (Sem I and II) examination is revised as per Appendix 2007-2008

MUMBAI-400 032
18th July, 2007

for I/c REGISTRAR

To,

The Director, Mumbai University Institute of Chemical Technology and the Principals of the affiliated colleges in Pharmacy

A/C 4.4 /12.06.2007

No.UG/ 320 -A of 2007

18th July, 2007.

Copy forwarded with Compliments for information to:-

- 1) The Dean, Faculty of Technology.
- 2) The Chairman, Ad-hoc Board of Studies in Pharmacy.

for I/c REGISTRAR

Copy to :-

The Director, Board of College and University Development, the Deputy Registrar (Eligibility and Migration Section), the Director of Students Welfare, the Executive Secretary to the Vice-Chancellor, the Personal Assistant to the Pro-Vice-Chancellor, the Registrar and the Assistant Registrar, Administrative sub-center, Ratnagiri for information.

The Officer on Special Duty and Controller of Examinations (10 copies), the Finance and Accounts Officer (2 copies), Record Section (5 copies), Publications Section (5 copies), the Deputy Registrar, Enrolment, Eligibility and Migration Section (3 copies), the Deputy Registrar, Statistical Unit (2 copies), the Deputy Registrar (Accounts Section), Vidyamagari (2 copies), the Deputy Registrar, Affiliation Section (2 copies), the Director, Institute of Distance Education, (10 copies) the Director, University Computer Center (IDE Building), Vidyamagari, (2 copies) the Deputy Registrar (Special Cell), the Deputy Registrar (PRO), the Assistant Registrar, Academic Authorities Unit (2 copies) and the Assistant Registrar, Executive Authorities Unit (2 copies). They are requested to treat this as action taken report on the concerned resolution adopted by the Academic Council referred to in the above Circular and that no separate Action Taken Report will be sent in this connection. the Assistant Registrar, Constituent Colleges Unit (2 copies), BUCT (1 copy), the Deputy Account, Unit V (1 copy), the In-charge Director, Centralize Computing Facility (1 copy), the Receptionist (1 copy), the Telephone

12.6.2007.

UNIVERSITY OF MUMBAI

**REVISED SYLLABUS
OF
B. PHARM DEGREE COURSE
(SEM. I & II)
EXAMINATION**

(With effect from the academic year 2007-2008)

FIRST YEAR B. PHARM
SEMESTER - I
GENERAL CHEMISTRY

3 hrs/week

S. No.	Topic	Hours
1.	Kinetics and Reaction Mechanisms. Kinetic and thermodynamic product control, principle of microscopic reversibility, isotope effects on kinetics, effect of reaction medium on the rate of the reaction	5
2.	Transition -state theory. General theory of the transition state, the reaction coordinate, rate determining transition state, Cur in principle	4
3.	Acid-Base Catalysis. General mechanisms of acid- and base-catalyzed reactions, rates of acid- and base-catalyzed reactions, Bronsted catalysis, correlation of reaction rates with acidity functions.	5
4.	Charge-Transfer complexes and reactions. Definition of complex, charge-transfer transition, donors and acceptors, ground state charge-transfer contribution.	5
5.	Co-ordination Chemistry: Nomenclature, Theories of bonding in co-ordinate complexes, Stability of complexes and chelation	5
6.	Brief introduction to the inorganic medicinal compounds: antacid (magnesium trisilicate and aluminium hydroxide gel), antimicrobial (hydrogen peroxide and povidone-iodine), astringent (Zinc oxide) and Pharmaceutical aid (talc and barium sulphate)	6

Reference Books:

1. Eric V Anslyn and Dennis A Dougherty, Modern Physical Organic Chemistry, John Wiley, 2006
2. Neil Isaacs, Physical Organic Chemistry, 2nd Edition, Pearson Education, 1995.
3. Louis P Hammett, Physical Organic Chemistry, McGraw Hill Education, 2nd Rev. Edition, 1970
4. Edward M Kosower, An Introduction to Physical Organic Chemistry, John Wiley and Sons, Inc., 1968

5. J D Lee, A New Concise Inorganic Chemistry, 3rd edition, Van Nostrand Reinhold Company Ltd.
6. John H and Edward B, Inorganic Medicinal and Pharmaceutical Chemistry, Varghese Publishing House, 1986.

ORGANIC CHEMISTRY-I

3 hrs/week

S. No.	Topic	Hours
1.	Structure and Properties of Organic Compounds: Types of bonds in organic compounds, hybridization of orbitals, formation of the same and bonds formed, bond length, bond angles, bond energies, bond polarization	4
2.	Inductive effects; concepts of H-bonding, hyperconjugation, resonance, van der Waal's interaction, inclusion phenomena; Acidity and basicity of molecules	4
3.	Concept of Electrophiles and Nucleophiles Calculations for determining empirical and molecular formulae	3
4.	Mechanism and elementary stereochemistry discussion of S _N 1, S _N 2 and S _N i mechanisms; E ₁ , E ₂ and E _{1cB} . Discussion of substitution vs elimination	7
5.	Discussion of the following classes of compounds in brief, with regard to IUPAC nomenclature, sources, methods of preparation, physical properties and general reactions of hydrocarbons (alkanes, alkenes, alkynes),	5
6.	Addition reactions of alkenes: Markonikov, Anti-Markonikov rules, Hydroboration, Oxymercuration-Demercuration, Ozonolysis, addition of KMnO ₄ and OsO ₄ , Addition reactions across conjugated dienes	6
7.	Aliphatic halogen compounds	2

Reference Books

1. Robert T Morrison and Robert N Boyd, Organic Chemistry, 6th edition, Pearson Education Pvt. Ltd., 2005

2. Peter Sykes, A Guide book to Mechanisms in Organic Chemistry, 6th Edition. Pearson Education, 2007.
3. I L Finar, Organic Chemistry, 5th edition, Pearson Education, 2006
4. Stanley Pine , Organic Chemistry, 5th edition, McGraw- Hill Companies., 2007
5. Francis Carey, Organic Chemistry, 4th edition, McGraw- Hill Companies, 2000

ANATOMY, PHYSIOLOGY AND PATHOPHYSIOLOGY – I

3hrs./Week

Sr.no.	Topics	Hours
1.	Brief introduction to human body and organization of human body	1
2.	Structural and functional characteristics of following tissues 1) Epithelial 2) Connective 3) Nervous 4) Muscle	2
3.	Detailed structure of cell membrane and trans-membrane movement of substances	2
4.	Components and functions of lymphatic system - Lymphatic organs and tissues - Organization of lymph vessels - Formation and flow of lymph	2
5.	Definition and etiology of following diseases in detail - AIDS - Autoimmune diseases (Rheumatoid arthritis / Grave's disease / Myasthenia Gravis / Rheumatic fever) - Hypersensitivity (Allergy)	3

6.	Haematology - Composition of blood - Functions of blood elements - Erythropoiesis - Synthesis of Haemoglobin - Leucopoiesis - Coagulation of blood - Blood groups	8
7.	Definition and etiology of following diseases, in detail - Anaemias – Types of anaemias - Polycythemia - Leucopenia - Leukocytosis - Thrombocytopenia - Leukemia	4
8.	Structure and properties of following muscles - Cardiac muscles - Smooth muscles - Skeletal muscles - Neuromuscular transmission and contraction of skeletal muscle - Energy metabolism in the muscle - Types of muscle contractions - Muscle tone	7
9.	Definition and etiology of following diseases, in detail - Spasticity - Tetany	1

PHYSICAL PHARMACY I

(3Hrs/Week)

Sr. No	TOPICS	Hours
1.	Gases: ▪ Ideal and Real gases ▪ Vanderwaals phenomenon ▪ Critical phenomenon, critical constants and their determination ▪ Liquefaction of gases – Linde's process and Claude's process ▪ Application of liquefaction in aerosols-introduction to the concept	6

2	Physical Properties of Drug Molecules: ▪ Additive, constitutive and colligative properties with examples ▪ Dipole moment, significance to pharmacy, concept of polarisability and molar ▪ Polarisation ▪ Refractive index and molar refraction and application of molar refraction to determine structures ▪ Viscosity: Definitions, concepts and applications ▪ Optical rotation and specific rotation and its application	6
3	Solutions of Non-electrolytes: ▪ Units for expressing concentration ▪ Ideal and real solutions ▪ Raoult's law, deviation from Raoult's law ▪ Methods to measure vapour pressure lowering and its application (problems) ▪ Distillation of binary mixtures and azeotropic distillation ▪ Concept of steam distillation ▪ Elevation of boiling point and determination of molecular weight (problems) ▪ Depression of freezing point and determination of molecular weight (problems) ▪ Osmotic pressure: Concept, methods to determine, molecular weight determination from osmotic pressure	9

Thermodynamics:

- Definition, Applications and Limitations
- Systems- Homogenous, Heterogenous
- Types of systems- Open, Closed, Adiabatic, Isothermal
- Types of properties- Intensive and Extensive property
- Equilibrium and Nonequilibrium states
- Types of processes- Isothermal, Adiabatic, Isobaric, Isochoric, Cyclic process
- Reversible and Irreversible process
- First law of thermodynamics
- Enthalpy, heat Capacity, $C_p - C_v = R$ (Derivation)
- Work of expansion against constant pressure
- Isothermal work of expansion against variable pressure

Thermochemistry:

- Heat of reaction, Heat of formation, Heat of combustion, Heat of solution - Differential and Integral heat of solution.
- Bond Energy- Calculation of Heat of reaction from bond energy data
- Kirchhoff's equation, Hess's law of constant heat summation
- Second law of thermodynamics
- Carnot theorem
- Efficiency of heat engine
- Entropy
- Third law of thermodynamics

Free Energy and its applications:

- Pressure and Temperature coefficients of free energy
- Maximum net work, Criteria for equilibrium,
- Chemical potential (only definition)
- Gibbs Helmholtz equation
- Clausius Clapeyron equation No derivation
- Vant Hoff equation No derivation

Problems

5 Properties of Solutions of Electrolytes:

- Electrolysis
- Faraday's laws of electrolysis
- Electrolytic conductance, Specific conductance, Equivalent conductance, Molecular conductance
- Transport number
- Measurement of conductance
- Variation of equivalent conductance with dilution
- Arrhenius theory of electrolytic dissociation- colligative properties, activity coefficient, coefficient expressing colligative properties.
- Theory of strong electrolytes
- Degree of dissociation
- Kohlrausch's law of independent migration of ions
- Applications of conductivity measurements- conductometric titrations and solubility of a sparingly soluble salt
- Equivalent conductance of a weak electrolyte at infinite dilution
- Degree of dissociation of a weak electrolyte

Problems

Reference Books-

1. P. J. Sinko, "Martin's Physical Pharmacy and Pharmaceutical Sciences" 5th edition, Lippincott's Williams and Wilkin, Indian Edn. Distributed by B. I. Publications Pvt. Ltd., 2006.
2. A. Findlay, "Practical Physical Pharmacy" revised and edited by J. A. Kitchener, 8th Edn. Longmans, Green and company Ltd. 1967.
3. B. S. Bahl, A. Bahl, G. D. Tuli, "Essentials Of Physical Chemistry" revised edition, S. Chand and company Ltd., New Delhi, 2006.
4. U. B. Hadkar "A Textbook of Physical Pharmacy", 6th Edn. Nirali Prakashan, Pune 2006.
5. U. B. Hadkar, T. N. Vasudevan, K. S. Laddha "Practical Physical Pharmacy" Yucca Publishing House, Dombivli, 1994.

Sl. No.	Topic	Hours
1	Historical background to the Profession of Pharmacy in India in brief. Brief overview of status of Pharmaceutical industry in India	2
2.	Introduction to Pharmacopoeias. Development of Indian Pharmacopoeia and other Compendia including B.P., U.S.P. - N.F., Ph Eur., International pharmacopoeia and B.P.C.	3
3.	Definition of drug Concept of dosage form and formulation - Scope of Pharmaceutics Routes of administration and physiological considerations Classification of dosage forms and their applications.	3
4.	Drug administration: Introduction to bioavailability and biopharmaceutics. Concept of drug efficiency and dose response. Introduction to Absorption, Distribution and fate of drug.	4
5.	Pharmaceutical calculations: Reduction and enlargement of formula, Formula by weight (w/v, w/w, v/v); in parts.	3
6.	Introduction to Good Manufacturing Practices and Quality Assurance.	2
7.	Introduction to galenicals- Methods of preparation of extracts includes maceration, percolation, decoction, infusion and digestion.	3
8.	Introduction to alternate systems of medicine: Ayurveda, Homeopathy, Unnani and Siddha.	1
9.	Delivery systems: Non - sterile monophasic liquids. Unit operation of : Filtration and clarification (Theory and equipment for filtration of solids from liquids) and mixing	8
10	Rheology: Definition and concepts, types of flow, thixotropy and measurement of flow properties.	3
		33

12. S. J Carter "Cooper and Gunn's Tutorial Pharmacy" 6th Edn. CBS Publishers and Distributors, Delhi, 1986.
13. M. J. Stocklosa, H. C. Ansel, "Pharmaceutical Calculations" 8th Edition, Indian Edition by K. M. Varghese Company, Mumbai 1986.

Note : Only principles and equipments to be covered

No mathematical derivations and numerical problems

Sr. No	Topic	Hours
1	Fluid flow: ▪ Mention fluid properties such as viscosity, compressibility and surface tension of fluids. ▪ Hydrostatics influencing fluid flow ▪ Fluid dynamics- Bernoulli's theorem, flow of fluids in pipes, laminar and turbulent flow.	4
2	Heat transfer: ▪ Modes of heat transfer- conduction, convection and radiation ▪ Fourier's law for slabs and pipes (only equation and factors affecting) ▪ Concepts of thermal conductivity and steady state heat transfer. ▪ Compound resistance in series. ▪ Heat transfer by convection- Natural convection and forced convection, dimensional analysis. Heat transfer between fluid and solid boundary. ▪ Heat transfer by radiation- Kirchhoff's law and Stefan Boltzmann law. (only equation and factors affecting) ▪ Overall heat transfer coefficient ▪ Heat exchangers- tubular and plate	6
3	Mass transfer: ▪ Mass transfer in turbulent and laminar flow ▪ Concept of interfacial mass transfer.	2

4	Pumping: ▪ Positive displacement pumps- reciprocating pumps , rotary pumps ▪ Centrifugal pumps ▪ Special pumps	4
5	Measurements: ▪ Measurement of flow- Classification of flow meters, venturi meter, orifice meter, pitot tube, rotameter and current flow meters ▪ Pressure measurement- Classification of manometers, simple manometer, U tube manometer and modifications, Bourdon gauge	4
6	Conveying of solids: ▪ Belt conveyor, Bucket conveyor, Screw conveyor and Pneumatic conveyor	1
7	Water purification: ▪ Pretreatment and purification by deionization, reverse osmosis and distillation.	2
8	Refrigeration and air conditioning: ▪ Water vapour- air mixture ▪ Hygrometry ▪ Humidification and dehumidification equipments- spray ponds, natural draft cooling towers and mechanical draft cooling towers. ▪ Refrigeration- equipment and concept of refrigeration load, concepts of brine systems and absorption systems	4

18	Centrifugation: ▪ Principle, objective and requirements of centrifugation ▪ Equipments- Hydroextractors.	1
19	Corrosion: ▪ Mechanism and types of corrosion. ▪ Factors influencing rate of corrosion. ▪ Methods of combating corrosion.	3
20	Materials of construction: ▪ Classification into metals nonmetals ▪ Ferrous and its alloys- cast iron, mild steel and stainless steel ▪ Copper and its alloys ▪ Nickel and its alloys ▪ Aluminum and its alloys ▪ Glass ▪ Plastics- Classification into thermoplastics and thermosetting plastics Properties and applications of polyvinyl chloride, polyethylene, polypropylene, polystyrene, polyester, ABS, phenolic and epoxy plastics, fluorocarbon plastics, chlorinated plastics and polycarbonate plastics.	4
		35

Reference Books

4. R. H. Perry and D. W. Green "Perry's Chemical Engineer's Handbook" 7th Edn. Chemical Hand Book. Mc Graw Hill Book Company, 1997.

ORGANIC CHEMISTRY LABORATORY-I

4 Hrs/week

Organic Spotting: Qualitative analysis of organic compounds - aspects to be covered are - solubility characterization and preliminary tests, elements detection, functional group characterization, derivative preparation

Reference Books:

1. Textbook of practical organic chemistry by Vogel, 4th edition, publishers Longman group Ltd
2. Practical Organic Chemistry by F G Mann and B C Saunders, 4th edition published by Orient-Longman
- Handbook by Kulkarni and Pathak, Published by Dastane Ramchandra and Company

PHYSICAL PHARMACY LAB -I

4hrs/Week

1. Determination of refractive index, molar refraction. Using water as a reference standard, to determine refractive index of two organic solvents and their mixtures and to determine composition of unknown. To determine RI of a solid (KCl) from two concentrations of solid solutions.
2. Viscosity: To determine the composition of the unknown binary mixture
3. Polarimetry: Different concentrations of sugar, determination of unknown concentration and specific rotation
4. Determination of molecular weight by Rast camphor method. Demonstration of Landsberger method.
5. Determination of heat of solution
6. Partition coefficient- Iodine

Reference Books-

1. U. B. Hadkar, T. N. Vasudevan, K. S. Laddha "Practical Physical Pharmacy" Yucca Publishing House, Dombivali, 1994.

ANATOMY, PHYSIOLOGY AND PATHOPHYSIOLOGY – Lab. (4 hr. / week)

1. HEMATOLOGY

1. Red Blood Cell (RBC) Count
 2. Total Leukocyte Count
 3. Differential Leukocyte (WBC) Count
 4. Hemoglobin content of blood
 5. Bleeding / Clotting Time
 6. Blood groups
 7. Erythrocyte Sedimentation Rate (ESR) / Hematocrit (Demonstration)
2. Study of human skeleton
 3. Microscopic study of permanent slides
Tissues :
 - Columnar, Cuboidal, Squamous, Ciliated Epithelium
 - Cardiac / Skeletal / Smooth muscle
 - Ovary, Testis, Liver, Pancreas, Thyroid, Tongue, Stomach, Intestine, Kidney, Lung, Spinal Cord, Cerebrum, Artery, Vein
 4. Measurement of blood pressure

Tutorial - Discussion on some common investigational procedures used in diagnosis of diseases with the help of charts / slides

Name and Importance of following tests :

1. Electroencephalogram (EEG) in diagnosis of Epilepsy
2. Electrocardiogram (ECG) in diagnosis of cardiac arrhythmia
3. Liver Function Tests -
 - Serum Bilirubin,
 - serum glutamate oxaloacetate transaminase (SGOT)
 - serum glutamate pyruvate transaminase (SGPT)
 - Urine Bilirubin,
 - Urine Urobilinogen,
4. Kidney Function Tests
 - Serum Creatinine,
 - Serum Urea, Uric Acid
 - Blood Urea Nitrogen (BUN)
5. Blood Glucose
6. Serum Cholesterol / Triglycerides
7. Serum Alkaline phosphatase (ALT)
8. Serum Acid phosphatase (APT)
9. Serum Lipase
10. Serum Amylase
11. Serum Calcium
12. serum lactate dehydrogenase (LDH)
13. Thyroid Function Tests - T_3 , T_4
14. Diagnostic tests for infectious diseases like
 - Malaria
 - Tuberculosis
 - Dengue
 - Leptospirosis

FIRST YEAR B. PHARM
SEMESTER- II

ANATOMY, PHYSIOLOGY AND PATHOPHYSIOLOGY – II 3hrs./Week

Sr.no.	Topics	Hours
1.	Anatomy and Physiology of Respiratory System - Exchange of gases - External and internal respiration - Mechanism and regulation of respiration - Lung volumes and lung capacities	4
2.	Definition and etiology of following diseases, in detail - Asthma - Pneumonia - Bronchitis - Emphysema - Respiratory Acidosis and Alkosis	3
3.	Reproductive system - Anatomical and Physiological considerations of male and female reproductive system - Menstrual cycle	4
4.	Definition and etiology of following diseases, in detail - Infertility - Sexually transmitted diseases (STD) - Dysmenorrhea	2

5.	Endocrine System Location hormones and functions of following endocrine glands : - Pituitary - Thyroid & Parathyroid - Adrenal - Pancreas - Testes & Ovaries - Control of hormone secretion	12
6.	Etiology of hypo and hyper secretion of above endocrine glands and related diseases	5

ORGANIC CHEMISTRY-II

3 hrs/week

S. No.	Topic	Hours
Discussion of the following classes of compounds in brief, with regard to IUPAC nomenclature, sources, methods of preparation, physical properties and general reactions, with mechanisms		
1	Alcohols and ethers	4
2	Carbonyl compounds (aldehydes and ketones)	5
3	Carboxylic acids, esters, anhydrides, amides	6
4	Amines and other nitrogen containing compounds.	5
5	Aromatic compounds: Concepts of aromaticity and aromatic character, Huckel's rule, structure and resonance in benzene; Nomenclature of aromatics; Electrophilic and nucleophilic substitution reactions in aromatic compounds.	10
6	Preparation and reactivity of polycyclic aromatics – naphthalenes, anthracene and phenanthrene	6

Reference Books

1. Morrison and Boyd, Organic Chemistry, 6th edition, Pearson Education Pvt. Ltd., 2006
2. Peter Sykes, A Guidebook to Mechanisms in Organic Chemistry, 6th Edition, Pearson Education, 2007.
3. I. L. Finar, Organic Chemistry, 5th edition, Pearson Education, 2006
4. Stanley Pine, Organic Chemistry, 5th edition, McGraw- Hill Companies, 2007
5. Francis Carrey, Organic Chemistry, 4th edition, McGraw- Hill Companies, 2000.

PHARMACEUTICAL ANALYSIS - I

3 hrs/week

Topic	Hours
Introduction to the study of monographs of five official compounds - sodium chloride, calcium carbonate, Talc, boric acid and ferrous sulphate.	4
I.P. Limits tests for: insoluble matter, soluble matter, nonvolatile matter, volatile matter, residue on ignition and ash value.	3
Various limit tests prescribed in I.P. e.g. chloride, sulphate, arsenic, lead, iron, nitrate, alkali and alkaline earth metals.	3
The theoretical basis and techniques of quantitative analysis, Solute, solvent, solution, solubility product range, concentration, definition of normality, molarity, molality, milliequivalence, strong acids and bases, weak acids and bases, buffers, primary and secondary standards, calculation based on stoichiometry problems, theory of indicators (both external and internal indicators), concept of end point.	5
Classification of theoretical considerations and applications to volumetric analysis.	3
Acid base titrations in aqueous medium titrations, complexometric titrations, redox titrations, argentimetric titrations and non-aqueous titrations with suitable example.	15
Estimation studies of important gases - Oxygen, Nitrogen and Carbon dioxide.	3

Reference Books

1. A. H. Bekett and J. B. Stanlake, Practical Pharmaceutical Chemistry, 4th edition, CBS Publishers and Distributors, 1997.
2. G. H. Jeffery and J. Bassett, Vogels' Textbook of Quantitative Chemical Analysis, 5th Edition, Longman Scientific and Technical, 1989.
3. Indian Pharmacopoeia, British Pharmacopoeia, USP, Martindale

TOPICS

Hours	
4	Ionic equilibria and buffers: ▪ Sorensens pH scale, calculation of pH, effect of pH on ionization of weak acids and bases, calculation of fraction unionized, buffers in pharmaceuticals and biological systems, concept of tonicity, isotonic buffer solutions, application of buffers and concept of tonicity in pharmacy. Problems
6	Solubility: ▪ Solubility of gases in liquids, Henrys law and applications ▪ Miscible liquids and partially miscible liquids ▪ Solubility of solids in liquids, ideal solubility, solubility parameters and prediction of solubility in regular solutions ▪ Partition phenomena and partitioning of weak electrolytes and its applications
8	Chemical Kinetics : ▪ Molecularity, order of a reaction and specific rate constant ▪ Zero order, first order and second order reaction. (Problems) ▪ Methods to determine order of a reaction ▪ Energy of activation, Arrhenius equation and application ▪ Collision theory and transition state theory ▪ Accelerated stability studies- concepts and applications Problems
2	Catalysis: ▪ Definition, types and specificity

Interfacial phenomena:

- Surface tension, Interfacial tension
- Surface free energy
- Pressure differences across curved interfaces
- Measurement of surface and interfacial tension-
Capillary rise method
- Drop weight method
- Du Nuoy tensiometer method
- Spreading of liquids
- Spreading coefficient
- Adsorption at liquid interfaces
- Surface active agents
- Hydrophilic- Lipophilic balance
- Types of monolayers at liquid interfaces
- Soluble monolayers
- Gibbs adsorption equation (No derivation)
- Insoluble monolayers and film balance
- Adsorption at solid interfaces
- Adsorption isotherms
- Freundlich adsorption isotherm
- Langmuir adsorption isotherm
- Wetting angle and Contact angle

8

Problems

Electromotive force:

- Electrochemical cell
- Types of electrodes
- Nernst equation and cell emf
- pH meter and Measurement of pH
- Ion sensitive electrodes
- Oxidation reduction indicators
- Concentration cells

3

Problems

Colloids:

- Classification
- Preparation, colloid properties such as optical kinetic and electrical
- Gold number
- Protective colloid
- Schultz Hardy rule.

5

- Reference Books:

PHARMACEUTICS - II

(3 hrs. / Week)

SEMESTER II	
	Hours
Introduction to preformulation studies with respect to monophasics: ▪ Organoleptic properties ▪ Purity ▪ Solubility and techniques of solubilization ▪ Partition coefficient and dissociation constant, Salt formation ▪ Polymorphism and crystal habit ▪ Stability and Interaction with excipients.	9
Complexation: ▪ Types of complexes and their analysis.	2
Formulation, large scale manufacturing, packaging and Quality Control of non - sterile monophasic liquids : ▪ Solutions ▪ Aromatic waters ▪ Syrups ▪ Elixirs ▪ Linctuses ▪ Drops ▪ Glycerites ▪ Paints ▪ Lotions ▪ Liniments ▪ Sprays.	9

Powder Technology: ▪ Fundamental and derived properties of powders and their measurement. ▪ Size reduction. ▪ Size separation.	7
Formulation, large scale manufacturing, Packaging and Quality control of Powders: ▪ Dusting powders ▪ Oral rehydration powders ▪ Dry syrup formulations.	4
Diffusion : ▪ Fick's laws and steady state diffusion, measurement of diffusion. Dissolution : ▪ Dissolution rate. Noyes – Whitney equation, Hixson – Crowell Law.	4
	35

Reference Books:

(3 hrs. / Week)

PHARMACOLOGY

TOPIC	Hours
• Brief history of microbiology: • Microbiology, scope and application in pharmaceutical sciences	1
Microscopy : • Simple microscope. • Compound microscope. • Resolving power, magnification, angular aperture, numerical aperture, oil immersion microscopy to be covered in practical, phase contrast and dark field. • Fluorescent and electron microscopy.	3
Staining (All staining with respect to bacteria): • Monochromatic staining • Gram staining • Acid fast staining • Capsule, flagella spore, cell wall staining • Negative staining • Motility	2
Classification of micro-organisms as different types	1
Classification of Bacteria: • Morphology, cell characteristics, habitat nutrition • Cultivation of bacteria: • Culture media. Cultivation, storage media, enrichment media, differential media, microbiological assay media • Cultivation of aerobes and anaerobes • Pure culture techniques- isolation • preservation of cultures • Reproduction and Growth phases, measurement of growth, factors affecting growth, continuous cultivation, enumeration of bacteria • Identification of bacteria • Overview of bacterial diseases in brief <i>Mycobacterium sp., Salmonella sp., Shigella sp., Staphylococcus sp., Klebsiella sp., E.coli., Pseudomonas, Clostridium- self study</i>	2 2 2 2 2 2 2 2 2
Viruses: Morphological characteristics, enumeration, cultivation and reproduction of HIV and oncogenic viruses.	3

Rickettsiae- Diseases Fungi:	Morphological characteristics and classification, reproduction, mycosis in brief (Pathogenic fungi like <i>Aspergillus</i> , <i>Dermatophytes</i> , <i>Candida albicans</i>)-	1 2
Algae:	Morphological characteristics, reproduction, economic significance of algae	1
Protozoa:	Morphological characteristics and classification, reproduction, pathogenic protozoa like <i>Amoeba</i> , <i>Paramecium</i> , <i>Trichomonas</i> , <i>Plasmodium</i>	2
II	Control of micro-organisms ▪ Different techniques of sterilization and their applications. Introduction to aseptic techniques (no equipments to be covered) ▪ Disinfectants and principles of disinfection.	6

- (2) M. Frobisher, R. D. Hinsdill, K. T. Crabtree and C. R. Goodheart "Fundamentals of Microbiology", 9th Edn. Saunders College Publishing, Philadelphia 1968.
- (3) W. B. Hugo and A. D. Russel "Pharmaceutical Microbiology" 6th Edn. Blackwell Science Ltd. UK, 2003.
- (4) R. Ananthanarayan and Ck. J. Paniker "Text Book of Microbiology", 7th Edn. Orient Longman Pvt. Ltd. Hyderabad, 2005.

PHARMACEUTICAL ANALYSIS LABORATORY I

4 hrs/week

1. Preparation and standardization of 0.1 N HCl, 0.1 N NaOH, 0.1 N $\text{Na}_2\text{C}_2\text{O}_4$, 0.1 N KMnO_4 , 0.1 N Iodine.
2. Assay of Zinc oxide, Magnesium sulphate, Ferrous sulphate, Potassium iodide, Copper sulphate.
3. Titrimetric Analysis: Determination of total alkalinity and sodium carbonate of sodium hydroxide determination of percentage of aspirin, Determination of ascorbic acid
4. Argentimetric titrations – NaCl powder and KCl.
5. I.P. limit tests for: chloride, sulphate, arsenic, heavy metal, iron.

Reference Books:

1. A. H. Bckett and J. B. Stanlake, Practical Pharmaceutical Chemistry, 4th edition, CBS Publishers and Distributors, 1997.
2. G. H. Jeffery and J. Bassett, Vogels' Textbook of Quantitative Chemical Analysis, 5th Edition, Longman Scientific and Technical, 1989.
3. Indian Pharmacopoeia, British Pharmacopoeia, USP, Martindale

PHARMACEUTICS LAB. I

4 HRS. / WEEK

List of experiments

Aromatic waters

Chloroform water I.P 66

Concentrated Dill water I.P 66/ Concentrated Anise water B.P.C 73

Dill water

Grape water

Syrups

Syrup I.P 66

Artificial syrup

Cough syrup - Codeine phosphate syrup B.P.C

Linctus
Simple linctus B.P.C

Elixirs
Piperazine citrate elixir B.P.C

Ear drops
Chloramphenicol ear drops B.P.C

Nasal drops
Ephedrine sulphate nasal drops B.P.C

Glycerites
Glycerine of starch I.P 55
Glycerine of boric acid I.P 55
Glycerine of tannic acid I.P 66

Solutions
Aqueous Iodine solution I.P 66
Weak Iodine solution I.P 66
Paracetamol Solubilised Paediatric drops
Cresol with soap solution I.P
Magnesium citrate oral solution N.F XIV
Chlorinated soda solution, surgical B.P.C
Iodine Paint compound B.P.C 68

Powders
Oral rehydration salt (ORS)
Evaluation of liquids for specific gravity and viscosity and powders for bulk density, flow rate and angle of repose

PHYSICAL PHARMACY LAB. II

4 HRS. / WEEK

KINETICS

1. Relative strength. Hydrochloric acid/sulphuric acid
2. Second order reaction(saponification)
3. Determination of order by equal fraction method (first order reaction)
4. Ostwalds isolation method to determine order

NONKINETICS

1. Partition coefficient- Benzoic acid
2. Surface tension: 1. Determination of surface tension of water, toluene, n-hexane, parachor and critical solution temp determination. 2. Determination of CMC
3. Phenol water: Critical solution temp and composition
4. Adsorption: Surface area determination
5. HLB of A surfactant
6. Potentiometry: Titration and determination of buffer capacity
7. Determination of molecular weight of a polymer from solution viscosity

Reference Books-

1. U. B. Hadkar, T. N. Vasudevan, K. S. Laddha "Practical Physical Pharmacy" Yucca Publishing House, Dombivali, 1994.

MICROBIOLOGY LABORATORY

4 HRS. / WEEK

- (1) Study of microscope and common laboratory equipments.
- (2) Gram staining
- (3) Monochrome staining
- (4) Negative staining
- (5) Cell wall staining
- (6) Spore staining
- (7) Capsule staining
- (8) Motility by hanging drop technique
- (9) Preparation and sterilization of nutrient broth, agar slants, plates, inoculation techniques.
- (10) Isolation of pure culture by pour plate and streak plate methods. Colony characterization and growth patterns in broth of cocci and bacilli
- (11) Total count by Breeds smear method
- (12) Growth by optical density, total plate count
- (13) Study of yeast, Aspergillus and Penicillium with respect to morphology
- (14) Observation on prepared slides of malarial parasite in blood smear, intestinal amoeba in stools
