#### UNIVERSITY OF MUMBAI No. UG/258 of 2009

RCULAR :-

A reference is invited to the Ordinances, Regulations and syllabi relating to the A reaction degree course vide this office Circular No. UG/461 of 2003, and September, 2003 and the Principals of the action pschelof of 2003, and the Principals of the affiliated collages in Engineering are informed that the recommendation made by the Engineering are bereby informed that the recommendation made by the Faculty of Technology at its hereby into more 1st April, 2009 has been accepted by the Academic Council at its meeting held on 27th May, 2009 vide item No. 4.20 - 15th neeting held on 27th May, 2009 vide item No. 4.20 and that, in accordance therewith, the peeting new the Third Year Electronics and Telecommunication Engineering Sem. V and VI) of the B.E. degree course is revised as per Appendix and that the same Sem. v and las per Appendix and las been brought into force with effect from the academic year 2009-2010.

MUMBAI - 400 032 <sup>a</sup> July, 2009

PRIN. K. VENKATARAMANI REGISTRAR

The Principals of the affiliated collages in Engineering.

A.C./4.20/27/05/2009

Objective	The objective of this course is to analyze the behaviour of signals and random phenomena, with special emphasis on its applications to communication engineering, signals and linear systems.	-
1	Introduction to Probability: Classical and relative-frequency-based definitions of probability; sets, fields, sample space and events; axiomatic definition of probability; joint and conditional probabilities, independence, total probability; Bayes' Rule and applications.	6hrs
,	Random variables: Definition of random variable, Cumulative Distribution Function (CDF), Probability Mass Function (PMF), Probability Density Functions (PDF) and properties, some special distributions: Uniform, Gaussian and Rayleigh distributions; Binomial, and Poisson distributions: Mixed Random Variables.	6 hrs
2	Functions of one random variable: Functions of one random variable and their distribution and density functions, mean, variance and moments of a random variable, Chebyshev, Markov inequality, characteristic functions, moment	6
	theorem.  Functions of two random variable:  Bivariate distributions, joint distribution and density, properties, marginal statistics, independence, one function of two random	6

i.		
3	two functions of two random variables; joint moments, covariance and correlation-independent, uncorrelated and orthogonal random variables; joint characteristic functions, conditional distributions, conditional expected values.  Stochastic Convergence and limit theorems: Sequence of random variables, convergence	7hrs
	everywhere, almost everywhere, MS, in probability, in distribution and comparison of convergence modes, strong law of large numbers (without proof); Central Limit Theorem (without proof) and its significance.	
4	Random processes: Discrete and continuous time random processes; probabilistic structure of a random process; mean, autocorrelation and autocovariance functions; stationarity- strict-sense stationary (SSS) and wide-sense stationary (WSS), ergodic processes: autocorrelation function of a WSS process and its properties, cross-correlation function.	7hrs
5	LTI Systems with stochastic inputs spectral representation of a real WSS process power spectral density and properties, cross-power spectral density and properties, auto-correlation function and power spectral density of a WSS random sequence; linear time-invariant system with a WSS process as an input: stationarity of the output, autocorrelation and power-spectral density of the output; examples of random processes: white noise process and white noise sequence; Gaussian process; Poisson process	7hrs
6	Markov Chains: Introduction, Homogeneous chain, stochastic matrix, Random walks, higher transition probabilities and the Chapman-Kolmogorov equation, classification of states.	7hrs

Question paper will comprise of total 7 questions, each of 20 marks.
 Only 5 questions need to be solved.
 Question number 1 will be compulsory and cover all modules.

- 4. Remaining questions will be mixed in nature. (e.g. Suppose Q.2 has part (a) from, module 3 then part (b) will be from any module other than module 3.)
- 5. In the question paper, weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

Term work:

Term work shall consist of minimum five experiments & 3 tutorials and a written

The distribution of marks for term work shall be as follows,

Laboratory work (Experiments and Journal)

: 15 marks.

Test (at least one)

: 10 marks.

Mandanca (Bractice land Theory)

: <del>05 marks</del>

The final certification and acceptance of term-work ensures the satisfactory performance of laboratory work and minimum passing in the term-work.

## Practical list

- 1. Simulation of discrete random variable and estimation of its PMF & CDF
- 2. Study of uniform, exponential, Rayleigh and Gaussian density functions

3. To study relation between distribution and density functions.

- 4. To calculate  $P(x_1 \le X \le x_2)$ ,  $P(X \le x)$ ,  $P(X \ge x)$ ,  $P(x_1 \le X \le x_2)$ , from distribution and or density function
- 5. Study of mixed random variable
- 6. Study of joint density/distributions.
- 7. Study of power spectral density
- 8. Study of random process.
- 9. Study of ergodic process
- 10. Study of LTI system with stochastic input

Module Objective	Objective of this course is to introduce to the students the fundamentals of microprocessor and microcontroller.	-
Pre-requisite	Concept of Basic Electronics and Digital Logic Systems	_
1	Basics of 8085:  Basic 8085 microprocessor architecture and its functional blocks,  8085 microprocessor IC pin outs and signals, address, data and control buses,  8085 features  Interrupt system of 8085  Stack and subroutine  Types of memory and memory interfacing  Decoding techniques – absolute and partial  Mapping techniques – I / O mapped I / O and memory mapped I / O  Serial I/O lines of 8085 and the implementation asynchronous serial data communication using SOD and SID	10
2	<ul> <li>Programming with 8085:</li> <li>Basic instruction set,</li> <li>Timing states, machine cycles and instruction cycles</li> <li>Instruction Timing diagram and ,</li> </ul> Wef 2009-10/T.E. EXT	8

	<ul> <li>interrupt process and timing diagram of interrupt instruction execution,</li> <li>Writing assembly language programs,</li> <li>Looping, counting and indexing operations related programs</li> <li>Stacks and subroutines operations related programs</li> <li>Conditional call and return instructions operations related programs</li> <li>Debugging programs.</li> </ul>	
3	Study and Interfacing of peripherals 8155, 8253/8254, 8259 with 8085	07
4	<ul> <li>Basics of 8051:</li> <li>Comparison of microprocessor and microcontroller.</li> <li>Architecture and pin functions of 8051 chip controller.</li> <li>CPU timing and machine cycles,</li> <li>Internal memory organization,</li> <li>Program counter and stack,</li> <li>Input/output ports,</li> <li>Counters and timers,</li> <li>Serial data input and output</li> <li>Interrupts.</li> <li>Power saving modes</li> </ul>	8
5	Programming with 8051: Instruction set, addressing modes, immediate, registers, direct and indirect data movement and exchange instructions, push and pop op-codes, arithmetic and logic instructions, bit level operations, jump and call instructions, input/ output port programming, programming timers, asynchronous serial data communications, and hardware interrupt service routines.  Interfacing of LCD display, hex keyboard, ADC0808, DAC0808 and Stepper motor with 8051 Current trends in microprocessors and practical implementation	8

<ul> <li>Introduction to ARM Processor</li> <li>ARM family architecture,</li> <li>Register architecture,</li> <li>Memory Access and addressing modes,</li> <li>Arithmetic and Logical Instructions,</li> <li>Branching Instructions</li> </ul>	10
Comparative study of salient features of 8051 and its derivatives like 89C51, 89C52, 89C2051 AND 89C2052. Current processor and controller survey. (cost, availability, popularity)	02

Question paper will be comprise of total 7 questions, each of 20 marks.

2. All questions must be analytical and design oriented.

3. Only 5 questions need to be solved.

4. Question number 1 will be compulsory and will cover all modules.

5. Remaining questions will be mixed in nature. (e.g.- suppose Q.2 has part (a) from, module 3 then part (b) will be from any module other than module 3.)

6. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

7. No question should be asked from pre-requisite module.

Practical/ Oral Examination:

Practical Examination will be based on experiments performed from the list of experiment given in the syllabus and the evaluation based on the same

Oral will be based on any experiment performed from the list of experiment given in the syllabus and the entire syllabus.

Term work:

Term work shall consist of minimum ten experiments and a written test.

The distribution of marks for term work shall be as follows:

: 1**g** marks. Laboratory work (Experiments and Journal) : 10 marks.

Test (at least one)

Attendance (Practical and Theory) The final certification and acceptance of term-work ensures the satisfactory performance of laboratory work and minimum passing in the term-work.

## Practical list

# 8185 Based (Max 02)

8.185 Bases (1) Addition and subtraction of two 8-bit numbers with programs based on

02) Addition and subtraction of two 16-bit numbers. (Using 2's complement method, also programs which access numbers from specified memory

(3) Addition and subtraction of two 16-bit BCD numbers. (Using DAA instruction.) (03) Addition of two 8-bit numbers using the method of successive addition

- 05) Division of two 8-bit numbers using the method of successive subtraction and
- (6) Block transfer and block exchange of data bytes.

07) Finding the smallest and largest element in a block of data.

- 08) Arranging the elements of a block of data in ascending and descending order.
- 09) Converting 2 digit numbers to their equivalents. a) BCD to HEX and b) HEX to BCD
- 10) Generating delays of different time intervals using delay subroutines and measurement of delay period on CRO using SOD pin of 8085A.

11) Generation of Fibonacci Series.

#### Application Based (Max 2)

01) Program controlled data transfer using 8255 PPI.

A) To INPUT data bytes from peripheral port and to store them in memory.

B) To OUTPUT data bytes from memory to peripheral port.

- 02) Study of interrupts by enabling them in main line program and then executing different subroutines when TRAP, RST 7.5, RST 6.5 & RST 5.5 are activated.
- 03) Interfacing 7 segment LED display using 8255A in static and dynamic mode.
- 04) Interfacing ADC 0808/0809.

05) Interfacing DAC 0808.

- 06) Interfacing stepper motor with microprocessor using 8255A in Half and Full excitation.
- 07) Interfacing a Centronics type printer.
- 08) Interfacing of Thumbwheel switches.

09) Interfacing of 8253 / 8254.

## 8051 experiments (Max 2)

Arithmetic operations

Packing and unpacking

Scanned with OKEN Scanner

Ascending and descending

8051 timer based experiment

Transmission of character using RS 232 to PC(preferably on bread board)

16 \* 2 LCD and Hex keyboard interface (preferably on bread board)

ADC or DAC interface (any application) (preferably on bread board)

On latest.

Experiments are to be performed on Proteus VSM Platform (Min 4) On latest: To design and test circuits on

1. LED blinking,

2. 7segments display,

- 3. 16x2 multiple character LCD,
- 4. Run stepper motor/ DC motor,
- 5. Implement square wave,
- 6. Temperature display using
- 7. Demonstration of traffic lights,
- 8. Speed control of motor,

Using ARM Processor.

Module Objective	The objective of this course is to introduce to the students the fundamentals of active & passive components and circuits used at RF.	-
Pre-requisite	Concept of Basic Electronics and Wave Theory.	-
1	Introduction Importance of radiofrequency design, Dimensions and units, frequency spectrum.  1] RF behaviour of passive components: High frequency resistors, capacitors & inductors.  2] Chip components and Circuit board considerations: Chip resistors, chip capacitors,	04
	surface mounted inductors.	40
2	Transmission Line Analysis: Two-wire lines, Coaxial lines and Microstrip lines. Equivalent circuit representation, Basic laws, Circuit parameters for a parallel plate transmission line.  1] General Transmission Line Equation: Kirchhoff voltage and current law representations, Traveling voltage and current waves, general impedance definition, Lossless transmission line model.  2] Microstrip Transmission Lines. 3] Terminated lossless transmission line: Voltage reflection coefficient, propagation  Wef 2009-10/T.E. EXTORMAN	10 CMU/ 11

	constant	
	constant and phase velocity, standing waves.  4] Special terminated conditions: Input impedance of terminated lossless line, Short circuit transmission line, Open circuit transmission line, Quarter wave transmission line.  5] Sourced and Loaded Transmission Line: Phasor representation of source, Power considerations for a transmission line, input impedance matching, return loss and insertion loss.	
3	The Smith Chart: Reflection coefficient in Phasor form, Normalized Impedance equation, Parametric reflection coefficient equation, graphical representation, Impedance transformation for general load, Standing wave ratio, Special transformation conditions.  Admittance Transformations: Parametric admittance equation, Additional graphical displays.  Parallel and series Connections: Parallel connections of R and L connections, Parallel connections of R and L connections. Series connections of R and L connections. Series connections of R and C connections. Example of a T Network.	10
4	RF Filter Design: Filter types and parameters, Low pass filter, High pass filter, Bandpass and Bandstop filter, Insertion Loss. Special Filter Realizations: Butterworth type filter, Chebyshev type filters, Denormalization of standard low pass design. Filter Implementation: Unit Elements, Kuroda's Identities and Examples of Microstrip Filter Design. Coupled Filters: Odd and Even Mode Excitation, Bandpass Filter Design, Cascading bandpass filter elements, Design examples.	12
5	Active RF Components: Semiconductor Basics: Physical properties of semiconductors, PN-Junction, Schottky contact. Bipolar-Junction Transistors: Construction, Functionality, Temperature behaviour, Limiting values.	8

	RF Field Effect Transistors: Construction, Functionality, Frequency response, Limiting values.  High Electron Mobility Transistors: Construction, Functionality, Frequency response.	
6	Active RF Component Modeling: Transistor Models: Large-signal BJT Models, Small-signal BJT Models, Large-signal FET Models, Small-signal FET Models.  Measurement of Active Devices: DC Characterization of Bipolar Transistors, Measurements of AC parameters of Bipolar Transistors, Measurement of Field Effect Bipolar Transistors Transistor Parameters.  Scattering Parameter Device Characterization.	10

- 1. Question paper will comprise of total 7 questions, each of 20 marks.
- 2. All questions must be analytical and design oriented.
- 3. Only 5 questions need to be solved.
- 4. Question number 1 will be compulsory and cover all modules.
- 5. Remaining questions will be mixed in nature. (e.g.- suppose Q.2 has part (a) from, module 3 then part (b) will be from any module other than module 3.)
- 6. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.
- 7. No question should be asked from pre-requisite module.

#### Practical/ Oral Examination:

Practical Examination will be based on experiments performed from the list of experiments given in the syllabus and the evaluation will be based on the same experiment.

Oral will be based on any experiment performed from the list of experiment given in the syllabus and the entire syllabus.

#### Term work:

Term work shall consist of minimum eight experiments and a written test.

The distribution of marks for term work shall be as follows,

Laboratory work (Experiments and Journal) : 1 marks

Test (at least one) : 10 marks.

Attendance (Reactical and Theory)

The final certification and acceptance of term-work ensures the satisfactory performance of laboratory work and minimum passing in the term-work.

# practical list

1

- Characterization of resistors. Characterization of Inductors
- Characterization of capacitors.
- 3. Study of Q in RLC Series resonance circuits.
- Study of Q in RLC Parallel resonance circuits.
- 6. LP Filter Design
- 7. HP Filter Design
- 8. BP Filter Design
- g. Tutorial on Smith Charts.
- 10. DC Characterization of BJT.
- 11. DC Characterization of FET.

Objective	objectives of this course is to study and analyse characteristics of continuous, discrete signals and systems.	-

Pre-Requisite	Concept of Fourier Series/Transform,	
Pre-1004	Laplace Transform.	-
	REPRESENTATION OF SIGNALS  Continuous and discrete time signals: Classification of Signals – Periodic aperiodic .even – odd – energy and power signals – Deterministic and random signals – complex exponential and sinusoidal signals – periodicity – properties of discrete time signal –impulse functions and its properties – Transformation in independent variable of signals: time scaling, time shifting.  Determination of Fourier series representation of continuous time and discrete time periodic signals, properties of continuous time and discrete time Fourier series.	8
2	ANALYSIS OF CONTINUOUS TIME SIGNALS AND SYSTEMS  Continuous time Fourier Transform and Laplace Transform analysis with examples – properties of the Continuous time Fourier Transform and Laplace Transform basic properties, Parseval's relation, and convolution in time and frequency domains.  Basic properties of continuous time systems: Linearity, Causality, time invariance, stability, magnitude and Phase representations of frequency response of LT! systems -Analysis and characterization of LTI systems using Laplace transform & application in electrical networks, Computation of impulse response and transfer function using Laplace transform.	10
3	SAMPLING THEOREM AND z-TRANSFORMS Representation of continuous time signals by its sample - Sampling theorem - Reconstruction of a Signal from its samples, aliasing - discrete time processing of continuous time signals, sampling of band pass signals.  Basic principles of z-transform - z-transform definition - region of convergence - properties of ROC - Properties of z-transform - Poles and Zeros - inverse z-transform using Contour integration - Residue Theorem, Power Series expansion and Partial fraction expansion, Relationship between z-transform and Fourier transform.	

	DISCRETE TIME SYSTEMS	10
	Computation of Impulse response & Transfer function using Z Transform., LTI-DT systems - Characterization using difference equation, Block diagram representation, Convolution, Properties of convolution and the interconnection of LTI Systems, Causality and stability of LTI Systems. DTFT, DTFT Properties and examples	
5	SYSTEMS WITH FINITE AND INFINITE DURATION IMPULSE RESPONSE Systems with finite duration and infinite duration impulse response – recursive and non-recursive discrete time system – realization structures – direct form – I, direct form – II, Transpose, cascade and parallel forms.	10
6	State Space Analysis Representation and Solution for continuous and discrete time LTI System	05

- 1. Question paper will comprise of total 7 questions, each of 20 marks.

- 5. Remaining questions will be mixed in nature. (e.g.- suppose Q.2 has part (a) from, module 3 then part (b) will be from any module other than module 3.)
- 6. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.
- 7. No question should be asked from pre-requisite module.

#### Oral Examination:

Oral Examination will be based on any experiment performed from the list of experiments given in the syllabus and the entire syllabus.

Term work shall consist of minimum four experiments and five tutorials and a written test.

The distribution of marks for term work shall be as follows,

: 16 marks. Laboratory work (Experiments and Journal)

Test (at least one)

Attendance (Practical and Theory)

The final certification and acceptance of term-work ensures the satisfactory performance of laboratory work and minimum passing in the term-work.

## practical list

1. Study of operations on signals.

2. Step and impulse response of system.

3. Impulse response using Laplace Transform.

4. Study of Sampling Theorem.

5. Study of Discrete Time Fourier Transform.

6 Pole-Zero plot of Z-transform

7. Realization structures of System

Objective	Objective of this course is to understand fundamentals of control system that has wide applications in industries. To understand optimal performance of the system, understanding and	
	performance of the system, underess	

	applying to conventional control strategies.	
Pre-requisite	Concept of electrical network	
	introduction:	-
	Open loop and closed loop systems, basic structure of a feedback control system.  Dynamic Models and Responses:  Dynamic model of an Die	10
	variable model, impulse response model, transfer function model, standard test/ disturbance signals and their models, transfer function model and dynamic response of a second order electrical system.	
2	Mathematical Modelling of State	10
	Basic units of a feedback control system, reduction of system block diagrams, signal flow graphs, Mason's gain rule, block diagram reduction using Mason's gain rule, error detector, block diagram model of a typical control system using simplified sub- system, transfer function blocks.	
3	Feedback Control System Characteristics: Stability, sensitivity, disturbance rejection, steady state accuracy, transient and steady state responses of a second order system. Effect of additional zeros and pole locations and dominant poles, steady state error constants, system type numbers and error compensation.	8
4	System Stability analysis and compensation Design: System stability bounds, Routh stability criterions, relative stability and range of stability, root locus concept, system characteristic equation, plotting root loci.	10
5	Nyquist Criterion and Stability Margins: Nyquist stability criterions, Nyquist plot, gain and phase margins, bode plot of magnitude and phase and determination of stability margins.	10
6	Control System Components: (Transfer function approach) DC servomotors, Synchros, Stepper motor	5

1. Question paper will comprise of total 7 questions, each of 20 marks.

2. All questions must be analytical.

3. Only 5 questions need to be solved.

4. Question number 1 will be compulsory and covering all modules.

- 5. Remaining questions will be mixed in nature. (e.g.- suppose Q.2 has part (a) from, module 3 then part (b) will be from any module other than module 3.)
- 6. In question paper weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.
- 7. No question should be asked from pre-requisite module.

## Oral Examination:

Oral Examination will be based on any experiment performed from the list of experiment given in the syllabus and the entire syllabus.

## Term work:

Term work shall consist of minimum six experiments and a written test.

The distribution of marks for term work shall be as follows.

Laboratory work (Experiments and Journal) : 10 marks.

Test (at least one) : 10 marks. Attendance (Practical and Theory) · Gomanica

The final certification and acceptance of term-work ensures the satisfactory performance of laboratory work and minimum passing in the term-work.

#### Practical list

- 1. Type '0' and Type '1' control system.
- Closed Loop Control System.
- 3. Study of Bode Plot
- 4. Error Detector
- 5. Linear System Simulator
- 6. Series Control System
- 7. Time Response of first and second order systems (RLC).

#### 'Simulations:

- 1. Time Response analysis
- 2. Frequency response analysis
- 3. Stability analysis

#### Recommended Books:

- Control Systems- Principles and Design- M. Gopal , Tata Mc-Graw Hill Publication
- 2. Norman Nise, Control Sysmtem Engineering 4th edition, wiley

3. Srivastava Manjita et, Control System, TMH.

- 4. Control Systems Engineering-I.J Nagrath and M.Gopal, New Age International Publishers
- 5. Modern Control Engineering- Katsuhiko Ogata, 4e, Pearson edu

Module	Contents	Hours
Objective	The objective of this course is to introduce to the students the basics of circuit assembly and debugging. To encouraging the students to design and implement innovative ideas.	-
Pre-Requisite	Electrical Engg. Fundamentals	
1	Study of soldering and PCB Design Students are expected to select any experiment* that they have already performed in earlier semester. Soldering and testing are to be done for the selected experiment. Schematic as well as PCB design is to be carried out using any software tool.  A report is to be prepared.	06
2	Analogue Project (Design and implementation) Students are expected to design any project*, of analogue circuit/system, discrete and/or IC based, of their choice (which can be used as experimental set-up in the laboratory). PCB design, fabrication, testing and implementation should be done. Students may use the software simulation for verification of hardware implementation. Documentation of the project is to be in standard IEEE format. Project report should include abstract in 100 words (max), key words, introduction, design, simulation, implementation, results/ results comparison, conclusion and	10

	Digital Project	
3	(Design and implementation ) Students are expected to design any project*, of digital circuit/ system of their choice, may involve microprocessor/ microcontroller (which can be used as experimental set-up in the laboratory). PCB design, fabrication, testing and implementation should be done. Students may use the software simulation for verification of hardware implementation. Documentation of the project is to be in standard IEEE format. Project report should include abstract in 100 words (max), key words, introduction, design, simulation, implementation, results/ results comparison, conclusion and references.	12
	•	

<sup>\*</sup> To be approved by the concerned faculty. Students will work in group, Minimum 2 students in each group but not more than 3.

#### Oral Examination:

Oral Examination will be based on any experiment performed and on the entire syllabus.

#### Term work:

Students will work in group, Minimum 2 students in each group but not more than 3.

Term work shall consist of minimum TWO Projects.

The final certification and acceptance of term-work ensures the satisfactory performance of laboratory work/ term-work.

Objective: This course is to create environmental awareness, of variety of environmental concerns.

Modul	Contents	Hr
е		S
1	The Multidisciplinary nature of environmental studies Definition, scope and importance Need for public awareness	1
2	Natural resources Renewabla and non-renewable resources Natural resources & associated problem.  a. Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.  b. Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.  c. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.  d. Food resources: World food problems overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.  e. Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.  f. Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.  • Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.	4
3	<ul> <li>Ecosystems</li> <li>Concepts of an ecosystem.</li> <li>Structure and function of an ecosystem.</li> <li>Producers, consumers and decomposers.</li> <li>Energy flow in the ecosystem.</li> </ul>	3

Objective	The objective of this course is to introduce to the students 16 bit Microprocessors & Microcontrollers	Hours -
Pre-requisite	concept of 8 bit Microprocessor and Microcontroller	_
1	8086 and 8088 Microprocessors: Architecture and organization of 8086/8088 microprocessors family, bus interface unit, 8086/8088 hardware pin signals, timing diagram of 8086 family microprocessors, simplified read/ write bus cycles, 8086 minimum and maximum modes of operation, 8086/8088 memory addressing, address decoding, memory system design of 8086 family, timing considerations for memory interfacing, input/output port addressing and decoding, introduction to 8087 floating point coprocessor and its connection to host 8086.	9
2	8086 assembly language programming: Addressing modes, 8086 instruction formats and instruction set, data transfer, arithmetic, bit manipulation, string, program execution transfer and program control instructions, machine codes of 8086 instructions, assemble language syntax, assembler directives, initialization instructions, simple sequential and looping programs in assemble language, debugging assembly	08
3	language programs.  Programmable Interface and peripheral devices: Interfacing of 8155, 8255 and 8259 with 8086 and study and interfacing of 8257	7

	DMA controller with 8086.  Comparative study of salient features of 8086, 80196, 80296, 80386, 80486 and Pentium	2
4	PIC Controllers: PIC18  PIC18 memory organization,  CPU registers,  Pipelining,  Instruction format,  Addressing modes,  Sample of PIC18 Instructions.  Overview of the 8-bit MCU Market	9
5	PIC18 Assembly language Programming  Assembly language programme structure, Assembler directives, Writing programmes to perform arithmetic computations, Programme loops, Reading and writing data in programme memory, Logic Instructions, Using programme loop to create time delays, Rotate instructions, Using rotate instructions to perform	9
3	multiplications & divisions.  Parallel Ports  I/O Addressing, Synchronization. Overview of the PIC18 parallel ports, Interfacing with simple output devices.	8

- .1. Question paper will comprise of total 7 questions, each of 20 marks.
- 2. All questions must be analytical and design oriented.
- 3. Only 5 questions need to be solved.
- 4. Question number 1 will be compulsory and will cover all modules.
- 5. Remaining questions will be mixed in nature. (e.g.- suppose Q.2 has part (a) from, module 3 then part (b) will be from any module other than
- 6. In the question paper, weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.
- 7. No question should be asked from pre-requisite module.

Practical Examination will be based on experiments performed from the list of experiment given in the syllabus and the evaluation based on the same experiment

Oral will be based on any experiment performed from the list of experiment given Oral will the syllabus and the entire syllabus. Term work:

Term work shall consist of minimum eight experiments and a written test. The distribution of marks for term work shall be as follows,

The discovery work (Experiments and Journal)

Test (at least one)

: 15 marks. : 10 marks.

Altendance (Practical and Theory)

05 marks The final certification and acceptance of term-work ensures the satisfactory the little of laboratory work and minimum passing in the term-work. practical list

8086 (any 4)

- Write a program to arrange block of data in i) ascending and (ii) descending
- 2. Write a program to find out any power of a number such that  $Z = X^N$ , where N is programmable and X is unsigned number.

3. Write a programmable delay routine

Write a program to find out largest number in a block.

5. Experiment on string instructions.

6. Write a programme to multiply 32 bit number.

PIC18:

## Experiments are to be performed on Proteus VSM Platform (any4) To design and test circuits

- 1. Addition, Subtraction
- 2. BCD Adder
- 3. Multiplication, Division
- 4. 4 bit LCD driver
- 5. Working of ADC/ DAC
- 6. Demonstration of Traffic light
- Implement door bell
- 8. Data Logger
- 9. Working of calculator

To design and test circuits on Graphical based LCD, Interface external memory, Temperature display, Key pad interface using AVR controller.

## Recommended Books:

	Page by April PSK PSK PSK DPSK M-aryl PSK QPSK PSK DPSK M-aryl PSK M-aryl PSK QPSK. M-aryl PSK Modulation, MSK, QAM-Introduction, Modulation, demodulation, signal space diagram, spectrum, bandwidth efficiency, power efficiency, probability of error, applications, carrier and timing recovery circuits.	
4	Base band Detection: Detection of binary signals- Matched filters, decision threshold in matched filters, error probability, maximum likelihood receiver structure, correlation realization of matched filter.	5
5	Error Control Systems:  Overview, power and band limited channels, optimum decoding, decoded error rate:  Error Control Block Codes: Introduction, code rate and code distance, some algebraic concepts, generator matrix, of a linear block code, systematic form of G, parity check matrix of a linear block code, decoding mechanism, hamming codes, extended hamming codes, shortened hamming codes, systematic for of H matrix, cyclic codes, generator matrix for cyclic codes, polynomial multiplication and division, systematic cyclic codes, practical systematic encoders, binary BCH codes, shortened cyclic codes, interleaving, Non algebraic decoding of cyclic codes, Maggot decoding, decoding shortened cyclic codes, burst detection( error) trapping), application areas.	14
6	Convolution Codes: Introduction, generator polynomial and optimal codes, puncturing code trellis, free distance, Viterbi decoding, hard decision Viterbi decoding, decoding window, soft decision Viterbi decoding, code spectra, recursive systematic codes, code transfer function, application areas.	10

- 1. Question paper will comprise of total 7 questions, each of 20 marks.
- 2. All questions must be analytical.
- 3. Only 5 questions need to be solved

4. Question number 1 will be compulsory and covering the all modules.

5. Remaining questions will be mixed in nature. (e.g.- suppose Q.2 has part (a) from, module 3 then part (b) will be from any module other than

6. In the question paper, weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

7. No question should be asked from pre-requisite module.

## Practical Examination:

practical Examination will be based on experiments performed from the list of experiments given in the syllabus and the evaluation will be based on the same experiment.

# Oral Examination:

Oral will be based on any experiment performed from the list of experiment given in the syllabus and the entire syllabus.

### Term work:

Term work shall consist of minimum eight experiments and a written test. The distribution of marks for term work shall be as follows,

Laboratory work (Experiments and Journal)

: 10 marks.

Test (at least one)

: 10 marks. : 45 marks

Attendance (Practical and Theo.y)

The final certification and acceptance of term-work ensures the satisfactory performance of laboratory work and minimum passing in the term-work.

#### Practical list

- 1. Measurement of bit error rate
- 2. Weasurement of coding gain
- Study of ASK,
- 4. Study of BFSK
- 5. Study of BPSK
- 6. Study of generation of cyclic codes
- 7. Measurement of bandwidth efficiency of QAM
- 8. Study of equalizer's performance parameters
- 9. Study of eye diagram using oscilloscope
- 10. Study of QPSK waveform using digital oscilloscope
- 11. Measurement of bandwidth efficiency of QPSK
- 12. Study of MSK generation and detection.

## Recommended Books:

- 1. Digital Communications-Simon Haykin, John Wiley & Sons publication
- 2. Principles of Digital Communication, Taub schilling, TMH, 3rdedi 3. Coding Techniques: An introduction to Compression to compression and

Objective	The objective of this course is to introduce to the students the fundamentals of radiation, reception, absorption and attenuation of acoustic waves.	1 1

	Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves – Energy density – Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales.  Reflection and Transmission:  Transmission from one fluid to another normal and oblique incidence – method of images.	10
2	RADIATION AND RECEPTION OF ACOUSTIC WAVES	10
	Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source - radiation impedance - Fundamental property of transducers.  Absorption and attenuation of sound Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient	
3	DIDEC DECONATORS AND THE	10
	PIPES RESONATORS AND FILTERS	,
	Resonance in pipes - standing wave pattern absorption of sound in pipes - long wavelength limit - Helmoltz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters - low pass, high pass and band pass.  Noise, Signal detection, Hearing and speech Noise, spectrum level and band level - combing band levels and tones - detecting signals in noise - detection threshold - the ear - fundamental properties of hearing - loudness level and loudness - pitch and frequency - voice.	12
4	ARCHITECTURAL ACOUSTICS:	12
	Sound in enclosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design.  Environmental Acoustics:  Weighted sound levels speech interference – highway noise – noise induced hearing loss –	

	noise and architectural design specification and measurement of some isolation design of portions.	
5	TRANSDUCTION  Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker – loudspeaker cabinets – horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers.	10
- ina	tion

Module Objective	The objective of this course is to introduce different radar systems and their applications.	-
Pre-requisite	Concept of Principles of Communication & Electromagnetic waves.	-
1	Introduction Nature of Radar, Maximum Unambiguous Range, Radar Waveforms, Simple form of Radar Equation, Radar Block Diagram and Operation, Radar Frequencies and Applications. Related Problems.	5
2	Radar Equation: Prediction of Range Performance, Minimum Detectable Signal, Receiver Noise and SNR, Integration of Radar Pulses, Radar Cross Section of Targets (simple targets - sphere, cone-sphere), Transmitter Power, PRF and Range Ambiguities, System Losses (qualitative treatment). Related Problems.	7
3	CW and Frequency Modulated Radar:  Doppler Effect, CW Radar – Block Diagram, Isolation between Transmitter and Receiver, Non-zero IF Receiver, Receiver Bandwidth Requirements, Applications of CW radar. FM-CW Radar, Range and Doppler Measurement, Block Diagram and Measurement, Block Diagram and Characteristics (Approaching/ Receding Targets), FM-CW altimeter, Measurement Targets), FM-CW altimeter, Measurement Errors, Multiple Frequency CW Radar.	10
4	Errors, Multiple Frequency CW Radar.  Radar Clutters: Surface clutter radar equations, sea clutter, land clutter, effects of weather on radar angles echoes.	5

	MTI and Pulse Donni	
5	MTI and Pulse Doppler Radar: Introduction, Principle, N'TI Radar with - Power Amplifier Transmitter and Power Oscillator Transmitter, Delay Line Cancellers - Filter Characteristics, Blind Speeds, Double Cancellation, Staggered PRFs. Range Gated Doppler Filters. MTI Radar Parameters, Limitations to MTI Performance. Non-coherent MTI, MTI versus Pulse Doppler Radar.	9
6	Tracking Radar: Tracking with Radar, Sequential Lobing, Conical Scan, Monopulse Tracking Radar — Amplitude Comparison Monopulse (one- and two- coordinates), Phase Comparison Monopulse. Target Reflection Characteristics and Angular Accuracy. Tracking in Range, Acquisition and Scanning Patterns. Comparison of Trackers.	5
	Detection of Radar Signals in Noise: Introduction, Matched Filter Receiver – Response Characteristics and Derivation, Correlation Function and Cross-correlation Receiver, Efficiency of Non-matched Filters, Matched Filter with Non-white Noise.	5
	Radar Receivers – Noise Figure and Noise Temperature. Displays – types. Duplexers – Branch type and Balanced type, Circulators as Duplexers. Introduction to Phased Array Antennas – Basic Concepts, Radiation Pattern, Beam Steering and Beam Width changes, Series versus Parallel Feeds, Applications, Advantages and Limitations.	7

- Question paper will comprise of total 7 questions, each of 20 marks.
   Only 5 questions need to be solved.
   Question number 1 will be compulsory and covering the all modules.

Remaining questions will be mixed in nature. (e.g.- suppose Q.2 has part Remaining adule 3 then part (b) will be from any module other than module 3.)

module sin paper weightage of each module will be proportional to In question proportional to question of respective lecture hours as mentioned in the syllabus.

Oral Examination: oral Examination will be based on any experiment/ Tutorial performed from the entire syllabus.

Term work: rem work: shall consist of minimum six experiments/ Tutorials and a written test. Term work stribution of marks for term work shall be as follows, the story work (Experiments and Journal)

6 ------

The distribution work (Experiments and Journal) Laboratory work (Experiments and Journal) : 16 marks. Test (at least one) : 10 marks.

The final certification and acceptance of term-work ensures the satisfactory The final certain work and minimum passing in the term-work.

# List of Experiments:

1. Study of BJT and MOSFET characteristics using circuit simulator

2. Comparison of different logic families

3. Study of static response of Logic gates in different technologies.

4. Study of transient response of Logic gates in different technologies

5. Layout of BJT and MOSFET using software like Magic

6. Layout of simple logic circuit like NAND gates, Adders

Objective of all above experiments is to relate theory and experiments for better understanding of the subject. In addition to above experiments Instructors can design two experiments to simulate different process steps such as oxidation, diffusion or ion implantation. For this, they can use any free software or write Matlab or "C" code.
